### VISION OF THE INSTITUTE

- *To make our students technologically superior and ethically strong by providing quality education with the help of our dedicated faculty and staff and thus improve the quality of human life*

### MISSION OF THE INSTITUTE

- *To provide latest technical knowledge, analytical and practical skills, managerial competence and interactive abilities to students, so that their employability is enhanced*
- *To provide a strong human resource base for catering to the changing needs of the Industry and Commerce*
- *To inculcate a sense of brotherhood and national integrity*

### M.Tech (Structural Engineering and Construction) Program POs

<b>PROGRAM OUTCOMES (POs)</b>	
<i>At the time of graduation, the post graduates of SE&amp;C will be able to ....</i>	
<b>PO1</b>	<i>independently carry out research/investigation and development work to solve practical problems</i>
<b>PO2</b>	<i>write and present an effective technical report/document</i>
<b>PO3</b>	<i>demonstrate competence in the area of structural engineering and construction</i>
<b>M.Tech (Structural Engineering and Construction) Program PSOs</b>	
<b>PROGRAM SPECIFIC OUTCOMES (PSOs)</b>	
<i>At the time of graduation, the post graduates of SE&amp;C will be able to ...</i>	
<b>PSO1</b>	<i>apply knowledge of structural engineering and construction for technology transfer from research to innovation.</i>
<b>PSO2</b>	<i>evaluate construction projects with a deeper conceptual coherence and integrity</i>

### RULES AND REGULATIONS FOR POSTGRADUATE PROGRAMME – 2-YEAR M.TECH. DEGREE PROGRAMME (PRR-14) (R17) (Applicable from the academic year 2014-15)

#### 1. INTRODUCTION:

- 1.1 The provisions contained in these regulations given the conditions for imparting course of instructions, conducting examinations and evaluation of students performance leading to 2-year M.Tech. degree programme to be offered by the Kakatiya Institute of Technology & Science, Warangal and awarded by Kakatiya University, Warangal
- 1.2 These regulations shall be called the "**Kakatiya Institute of Technology & Science, Warangal (KITSW) regulations for the award of 2-year M.Tech. degree programme**" by Kakatiya University, Warangal
- 1.3 They shall come into effect from the date of getting approval from the Academic Council of the Kakatiya Institute of Technology & Science, Warangal
- 1.4 They shall be applicable for all students enrolling for 2-year M.Tech. degree programme at the Kakatiya Institute of Technology & Science, Warangal from the academic year 2014-15.

#### 2. DEFINITIONS:

- 2.1 "**M.Tech.**" means Master of Technology, a Post-Graduate Degree awarded from the Kakatiya University, Warangal
- 2.2 "**University**" means Kakatiya University, Warangal
- 2.3 "**Institute**" means Kakatiya Institute of Technology & Science, Warangal
- 2.4 "**UGC**" means University Grants Commission, New Delhi
- 2.5 "**AICTE**" means All India Council for Technical Education, New Delhi
- 2.6 "**MHRD**" means Ministry of Human Resource & Development, Govt. of India, New Delhi
- 2.7 "**TSCHE**" means Telangana State Council for Higher Education, Govt. of Telangana, Hyderabad
- 2.8 "**GB**" means Governing Body of the Institute
- 2.9 "**AC**" means Administrative Committee of the Institute
- 2.10 "**FC**" means Finance Committee of the Institute
- 2.11 "**Council**" means Academic Council of the Institute
- 2.12 "**Principal**" means Principal of the Institute
- 2.13 "**Dean**" means Dean of specific affairs of the Institute
- 2.14 "**HOD**" means Head of the Department of specific programme offered by the Institute
- 2.15 "**BoS**" means Board of Studies in the engineering of a specific programme offered by the Institute
- 2.16 "**CoE**" means Controller of Examinations of the Institute.

#### 3. POST GRADUATE PROGRAMMES:

- 3.1 The Institute shall offer the following Post Graduate Programmes:
  1. **Structural Engineering & Construction (offered by the Dept. of Civil Engineering)**
  2. **Design Engineering (offered by the Dept. of Mechanical Engineering)**
  3. **Digital Communications (offered by the Dept. of Electronics & Communication Engineering)**
  4. **Software Engineering (offered by the Dept. of Computer Science & Engineering)**
  5. **VLSI & Embedded Systems (offered by the Dept. of Electronics & Instrumentation Engineering)**
  6. **Power Electronics (offered by the Dept. of Electrical & Electronics Engineering)**

3.2 The provisions of these regulations shall also be applicable to any new postgraduate programmes that are introduced from time to time with approval from appropriate bodies such as MHRD / AICTE / UGC, etc.

#### 4. ADMISSION:

4.1

Course	Specialization	Eligibility		
		Qualifying Degree	GATE / GPAT Exam	PGE CET Exam
M.Tech.	Structural Engineering & Construction	B.E. / B.Tech. / AMIE in Civil Engineering / Construction Engineering or equivalent. They should have qualified at GATE/ PGE CET	CE	CE
M.Tech.	Design Engineering	B.E. / B.Tech./ AMIE in Mechanical Engineering / Production Engineering / Industrial Engineering / Aeronautical Engineering Marine Engineering. They should have qualified at GATE / PGE CET	ME	ME
M.Tech.	Digital Communication	B. E. / B.Tech. / AMIE in ECE, AMIE (Electronics & Telecommunication Engg. / B.E. / B.Tech. in Electrical or Electrical & Electronics Engg. EIE and Bio-medical Engg. or equivalent. They should have qualified at GATE / PGE CET	EC / IN	ECE
M.Tech.	Software Engineering	B.E. / B.Tech. / AMIE in any branch of Engg. / Tech. (Or) equivalent Master's Degree in Physics, Statistics, Mathematics, Applied Mathematics, Applied Statistics, Applied Physics, Geophysics, M.Sc. (Computer Science), M.Sc. (Information Systems) (Computer Applications & Electronics) and MCA or equivalent. They should have qualified at GATE / PGE CET	CS	CS
M.Tech.	VLSI & Embedded System	B.E. / B.Tech. / AMIE in ECE, EIE, EEE, CSE, IT (Or) equivalent. They should have qualified at GATE / PGE CET	CS / EC / IN / EE	EC
M.Tech.	Power Electronics	B.E. / B.Tech. / AMIE in Electrical & Electronics Engg. / Electrical Engg. or equivalent	EE	EE

#### 4.1 For GATE candidates

The candidates should have passed B.E./B.Tech./AMIE in any branch of Engg./ Tech. (or) equivalent Master's Degree in Physics, Statistics, Mathematics or Applied Mathematics, Applied Statistics, Applied Physics, Geophysics, M.Sc. (Comp. Sc.), M.Sc. ( Information Systems) (Computer Applications and Electronics) and MCA or equivalent. They should have qualified at the GATE and possess a valid GATE score. The seats will be assigned purely on the basis of merit of GATE.

#### For Sponsored seats

The candidates should have passed BE/B.Tech./AMIE in any branch of Engg./ Tech. (or) equivalent Master's Degree in Physics, Statistics, Mathematics or Applied Mathematics, Applied Statistics, Applied Physics, Geophysics, M.Sc. (Comp. Sc.), M.Sc. ( Information Systems) (Computer Applications and Electronics) and MCA or equivalent.

The criterion for selection of sponsored candidates shall be by their merit at the entrance examination to be conducted by the PGCET

Admission shall made into sponsored category only with the candidates who are qualified either GATE/ PGCET or as decided by the admission committee.

1. His/ Her application shall be duly recommended by the sponsoring agency for admission to the course and forwarded to the Convener, PGCET
2. He/ She must be permanent employee with the sponsoring agency for at least two years, after obtaining the qualifying degree.
3. The sponsoring agency must be a Government establishment or a public-sector undertaking, or a reputed private engineering college
4. The sponsoring agency shall certify that the candidates will be granted leave for pursuing the M.E./ M.Tech. Regular course of study.
5. The candidates who are working Research Projects approved by the competent authority are also required to fulfill the above conditions before they are sponsored for admission

4.2 The Admissions shall be made in accordance with the guidelines issued by TSCHE

### 5 ACADEMIC SESSION:

- 5.1 Each academic session is divided into two semesters (odd and even), each of 15 weeks including two Mid Semester Examinations.
  - a) **Odd Semester:** from 3<sup>rd</sup> week of June to Second week of October. However, academic session of the first semester will be decided based on counseling schedule declared by the TSCHE.
  - b) **Even Semester:** from the last week of November to 3<sup>rd</sup> week of March.
- 5.2 The Institute shall announce the schedule for all the academic activities well before the commencement of the academic year and take all the necessary steps to follow them scrupulously.
- 5.3 The academic activities in a semester normally include registration, course work, Continuous Internal Evaluation (CIE), End Semester Examination (ESE) and declaration of results.

### 6. REGISTRATION:

- 6.1 All the students are required to register in person at the beginning of each academic year on the dates specified in the academic calendar.
- 6.2 The sole responsibility for registration rests with the student concerned.
- 6.3 Registration of students will be centrally organized by the Academic Section.

- 6.4 The Registration procedure involves:
- Filling of the prescribed registration form
  - Payment of fees and clearance of outstanding dues (if any).
  - Signing undertakings (undertaking for regular attendance, discipline and against ragging) along with the parents.
- 6.5 If for any compelling reasons like illness, etc., a student is unable to register on the announced day of registration, he/she can register within 12 working days from the beginning of the academic year on payment of an additional late fee as prescribed by the Institute.
- 6.6 **No late registration shall be permitted after 12<sup>th</sup> working day** from the scheduled date of commencement of class work for that academic year.
- 6.7 Only those students will be permitted to register who have
- cleared all institute and hostel dues of previous semesters.
  - paid all required prescribed fees for the current academic year.
  - not been debarred / detained from registering for a specified period on disciplinary or any other grounds.
  - cleared the minimum academic requirement as detailed in Regulation No. 14.

## 7. CURRICULUM

- 7.1 The duration of the programme leading to 2-year M.Tech. degree will be 4 semesters (2 academic years).
- 7.2 The curricula for different degree programmes as proposed by the department and recommended by the BoS shall have the approval of the Academic Council.
- 7.3 The curricula to be followed for all the M.Tech. programmes is as specified and approved by the BoS.
- 7.4 The courses offered would have a **Lecture – Tutorial – Practical (L-T-P)** component to indicate contact hours. Separate laboratory (practical) course may exist (0-0-P) in certain cases as decided.
- 7.5 The academic programmes of the Institute follow the credit system.
- 7.6 Each course shall have an integer number of credits(C), which reflects its weightage. The number of credits of a course in a semester shall ordinarily be calculated as under:
- Number of credits of a course,  $C = L + (T+P) / 2$**
- where L, T, P represent the No. of Lecture, Tutorial and Practical hours / week.
  - The fraction to be rounded off to next integer value.
- 7.7 **Course Code:** Each course offered in the Postgraduate (M.Tech.) curriculum at this institute shall be listed by using a total of 8 digits, as follows:
- Ex: **P14SC101**
- The first letter, to represent the Post Graduate Programme  
**Ex.** P for Postgraduate Course
  - The next two numerals, to represent the year in which the syllabus is proposed / revised.  
**Ex.** 14 for the year 2014 from which syllabus is applicable for the batches admitted from academic year 2014-15.
  - The next two letters, to represent the specialization offered.  
**Ex.** SC for Structural Engineering & Construction
  - The last three numerals, to represent the course number and semester in which it is being offered.  
**Ex.** XYZ; X - Semester number; YZ – Course number  
101 represents course number 01 offered in first semester

In general, a course code "P14SC101" represents an **Postgraduate Course number-01 offered for the batches admitted from the year 2014 in Structural Engineering & Construction in first semester.**

7.8 The syllabus of each course in the M.Tech. curriculum shall be divided into Four units.

#### 8. ATTENDANCE:

- 8.1 All the students are normally required to have full (100%) attendance.
- 8.2 However, the attendance in no case should be less than 75% of the total classes held in all the courses offered in a semester for that academic year.
- 8.3 Students having attendance less than 75% in aggregate will be detained and will not be allowed to appear for the end semester examination of that semester.
- 8.4 All such students who are detained have to repeat the entire semester when it is offered.

#### 9. CONDUCT AND DISCIPLINE:

- 9.1 All students shall be required to conduct themselves in a manner befitting the reputation of the institution, within and outside the premises of the Institute; and are expected to complete their studies without any break.
- 9.2 As per the order of Hon'ble Supreme Court of India, ragging in any form is strictly banned. Involvement of a student in ragging will be considered as a gross indiscipline and may lead to his / her expulsion from the Institute.
- 9.3 Detailed rules regarding the conduct and discipline (code of conduct) are given in Appendix - I.

#### 10 EVALUATION PROCEDURE:

- 10.1 The evaluation of students in a course for all 2-year M.Tech. programme (4 semesters) is a continuous process and is based on their performance in different examinations as mentioned below:
  - a) Sessional, involving **Continuous Internal Evaluation (CIE)** conducted all through the semester which includes **Mid-Semester Exams (MSE)** and **Teachers Assessment (TA)** through assignments.
  - b) Terminal, often designated as **End Semester Examination (ESE)** which includes a written examination for theory courses, practical, comprehensive viva-voce, dissertation examination with built-in oral part for laboratory / comprehensive viva-voce / dissertation courses.
- 10.2 A student's performance in a course (subject) shall be judged by taking into account the result of Continuous Internal Evaluation (CIE) and End Semester Examination (ESE) together.
- 10.3 Continuous Internal Evaluation (CIE) and End Semester Examination (ESE) shall have 40:60 weightage.  
i.e. Continuous Internal Evaluation (CIE) carrying 40% weightage and End Semester Examination (ESE) carrying 60% weightage.
- 10.4 **Continuous Internal Evaluation (CIE) for Theory courses:**
  - 10.4.1 The Continuous Internal Evaluation (CIE) throughout the semester shall consist of Teachers Assessment (TA) and Mid Semester Examination (MSE).
  - 10.4.2 For assigning marks in Teachers Assessment (TA), performance in assignments is to be considered. Teacher shall give at least 2 assignments per each unit of syllabus covering the entire contents of that unit.
  - 10.4.3 There shall be two mid semester examinations (MSE-I and MSE-II) of two hour duration for each course.  
The average of the marks scored in MSE-I and MSE-II will be considered for evaluation under MSE. Hence, **it is mandatory for the student to take both the mid semester examinations.**

10.4.4 The distribution given to each component of Continuous Internal Evaluation (CIE) for a theory course is given below:

S. No.	Particulars	Weightage
1.	Teacher's Assessment (TA) (Assignments)	15%
2.	Mid Semester Examination (MSE) (MSE-I & MSE-II)	25%
<b>Total Weightage::</b>		<b>40%</b>

10.4.5 The marks obtained by the students in Mid Semester Examination (MSE) must be submitted to the Controller of Examination (CoE) the teachers within 10 days from the date of conduct of the examination.

10.4.6 The dates for Mid Semester Examination (MSE) and End Semester Examination (ESE) will be declared by the CoE in consultation with the Dean, Academic Affairs.

10.5 **End Semester Examination (ESE) for Theory Course:**

There shall be an End Semester Examination (ESE) at the end of each semester for three hour duration for each course.

10.6 **Continuous Internal Evaluation (CIE) for Practical (Laboratory) Course:**

10.6.1 Continuous Internal Evaluation (CIE) for practical course shall carry 40% Weightage.

10.6.2 The Continuous Internal Evaluation (CIE) throughout the semester shall consist of the following:

Assessment	Weightage
Regular Experimentation / Job work	10%
Regular submission of record	10%
Quiz / Skill Test at the end of semester	10%
Viva-voce at the end of semester	10%
<b>Total Weightage</b>	<b>40%</b>

10.7 **End Semester Examination (ESE) for Practical (Laboratory) Course:**

10.7.1 There shall be an End Semester Examination (ESE) at the end of each semester for three hour duration for each practical course.

10.7.2 The End Semester Examination (ESE) for practical course shall carry 60% Weightage.

10.7.3 The marks distribution at End Semester Examination (ESE) shall be as follows:

Assessment	Weightage
Procedure / Experimentation / Tabulation / Result, as applicable ...	40%
Viva-voce	20%
<b>Total Weightage</b>	<b>60%</b>

10.8 **Continuous Internal Evaluation (CIE) for Seminar :**

10.8.1 There shall be only Continuous Internal Evaluation (CIE) for Seminar.

10.8.2 A teacher will be allotted to a student for guiding in

- (i) selection of topic
- (ii) work to be carried out
- (iii) report writing and
- (iv) presentation (PPT) before Internal Seminar / Mini Project evaluation committee

10.9 **Continuous Internal Evaluation (CIE) for Comprehensive Viva-voce :**

External oral examination shall be conducted on a pre-notified date in the presence of an internal examiner. The oral examination shall cover the entire content of courses covered in First and Second Semester.

#### 10.10 Continuous Internal Evaluation (CIE) for Project Work:

10.10.1 Project work shall be normally conducted in two stages, spread over two sequential semesters i.e. third and fourth semester.

10.10.2 At the end of first stage (third semester), student shall be required to submit a preliminary report of work done for evaluation to the project coordinator and present the same before an Internal Project Evaluation Committee. The Continuous Internal Evaluation (CIE) for the seventh semester is as follows:

Assessment	Weightage
Project Supervisor Assessment	50%
Internal Project Evaluation Committee Assessment	50%
<b>Total Weightage:</b>	<b>100%</b>

10.10.3 At the end of second stage (fourth semester), student shall be required to submit two bound copies, one being for the department and other for the Project Supervisor. The project report shall be evaluated by the Project Evaluation Committee and external oral examination shall be conducted on a pre-notified date. The project work evaluation for the fourth semester is as follows:

Assessment	Weightage
Project Supervisor Assessment	20%
Internal Project Evaluation Committee Assessment	20%
ESE (Presentation & Viva Voce)	60%

### 11 MINIMUM REQUIREMENT FOR PASSING A COURSE

- 11.1 **Theory Course:** A student is deemed to have passed in a theory course, if he / she secures
- 35 percent of marks assigned to End Semester Examination (ESE) and
  - 35 percent of marks assigned to the Mid Semester Examination (MSE) and End Semester Examination (ESE) of the course taken together.
- 11.2 The average of the marks scored in both Mid Semester Examination (MSE) (as per the Regulation No. 10.4.4) will be considered for the evaluation under Mid Semester Examination (MSE).
- 11.3 **Laboratory Course:** A student is deemed to have passed in a laboratory course, if he / she secures
- 35 percent of marks assigned to End Semester Examination (ESE) and
  - 35 percent of marks assigned to the Teachers Assessment (TA) and End Semester Examination (ESE) of the laboratory course taken together.

### 12 GRADING SYSTEM

- 12.1 At the end of the semester a student is awarded a letter grade in each of his / her courses taking into account his / her performance in Continuous Internal Evaluation (CIE) and End Semester Examination (ESE).
- 12.2 The typical grades and their numerical equivalents on 10-point scale (called Grade Points) are as follows:

Performance	Letter Grade	Grade Points (G <sub>i</sub> )
Superior	S	10
Excellent	A	9
Very Good	B	8
Good	C	7
Average	D	6
Pass	P	4
Fail	F	0

- 12.3 F-Grade is a Fail Grade. The course in which the student has earned F-Grade will be termed as backlog Course.
- 12.4 In addition, there shall be a transitional M-grade.
- M-Grade for “Debarred” due to indiscipline / malpractice during examination.
- 12.5 The Institute shall follow absolute grading system. The grades will be awarded as under:

Grade	Percentage Score (X)
S	X > 90
A	80 < X < 90
B	70 < X < 80
C	60 < X < 70
D	45 < X < 60
P	35 < X < 45
F	X < 35

- 12.6 For arriving at a grade obtained by a student in a particular course (subject), initially numeric marks obtained by the student out of 100 are to be determined. Once a numeric mark is obtained, the same is to be converted to a letter grade following the guidelines given in 12.5.
- 12.7 A Semester Grade Point Average (SGPA) will be computed for each semester. The SGPA will be calculated as follows:

$$SGPA = \frac{\sum_{i=1}^n C_i G_i}{\sum_{i=1}^n C_i}$$

where „n” is the no. of courses (subjects) offered (excluding mandatory courses) for the semester, „C<sub>i</sub>” is the credits allotted to a particular course, „G<sub>i</sub>” is the grade-points carried by the letter corresponding to the grade awarded to the student for the course as illustrated in 12.2.

- 12.8 The SGPA would indicate the performance of the student in the semester to which it refers. SGPA will be rounded off to the second place of decimal and recorded as such.
- 12.9 Starting from the second semester, at the end of each semester, a Cumulative Grade Point Average (CGPA) will be computed for every student as follows:

$$CGPA = \frac{\sum_{i=1}^m C_i G_i}{\sum_{i=1}^m C_i}$$

where „m” is the total number of courses (subjects) the student has been offered from the first semester onwards upto and including the present semester, „C<sub>i</sub>” and „G<sub>i</sub>” are as explained in 12.7.

- 12.10 The CGPA would indicate the cumulative performance of the student from the first semester up to the end of the semester to which it refers. CGPA will be rounded off to the second place of decimal and recorded as such.
- 12.11 SGPA and CGPA are calculated in consideration of only credits cleared, i.e. F-grade credits are not included for calculation.

### 13 SUPPLEMENTARY EXAMINATIONS

- 13.1 A student who obtained the F-grade in a course (theory or practical) can appear in a subsequent End Semester Examination (ESE) in the same course as supplementary candidate.
- 13.2 However the marks secured in Continuous Internal Evaluation (CIE) by the student in that course during the semester study shall remain unaltered.
- 13.3 The students those who have passed in the supplementary examination will be awarded grade with “\*” marked on the courses passed in the supplementary.

## 15 IMPROVEMENT EXAMINATION

- 15.1 Students who wish to improve their SGPA / CGPA are permitted for SGPA / CGPA improvement only for theory courses. The student may opt to re-appear all the courses of a semester at the immediately succeeding End Semester Examination (ESE) for improving his / her grades. However, the students should clear all the courses of a particular semester in which he / she intends to take an improvement examination.
- 15.2 Further, when once the student appears for the improvement examination he / she shall forego the grades secured in the earlier End Semester Examination (ESE) in the whole set of courses prescribed for that semester. However, the marks secured in Continuous Internal Evaluation (CIE) by the student in those courses during the semester study shall remain unaltered.
- 15.3 Students those who have re-appeared for improvement will be awarded grade with '\$' marked on the courses appeared for improvement examination. '\$' will state the grade improvement. Such improved grades will not be counted for the award of Prizes, Medals and Rank.
- 15.4 However, the students who register for improvement examinations and wish to drop from appearing the examinations, by written application to the CoE, before commencement of examinations, shall be permitted to retain their earlier grades.

## 16 GRADUATION REQUIREMENT

- 16.1 A student shall be declared to be eligible for award of the M.Tech. degree, if he / she has registered and completed all the courses with a minimum P-grade scored in every course
- 16.2 Normally a student should complete all the requirements consecutively in 4 semesters (2 academic years) for the award of M.Tech. degree. However, the students who fail to fulfill all the requirements for the award of M.Tech. degree within a period of 8 consecutive semesters (4 academic years from the registration in 1<sup>st</sup> semester) shall forfeit his / her enrolment to the program.
- 16.4 CGPA to Percentage (%) and Class Conversion is as follows:

S. No.	Division	Eligibility Criteria
1	First Division with Distinction	a) Student should secure $CGPA \geq 8.0$ . b) Student should pass all the courses along with the batch of students admitted with him / her within 8 consecutive semesters (6 consecutive semesters for lateral entry students). c) Student who appeared for improvement examination upto 6 <sup>th</sup> semester will also be considered. d) The failed candidate in any course shall not be awarded Distinction.
2	First Division	Student should secure CGPA, which is $6.5 \leq CGPA < 8.0$ within the time frame of the programme i.e. 16 semesters (12 semesters in case of lateral entry students).
3	Second Division	Student should secure CGPA, which is $5.0 \leq CGPA < 6.5$ within the time frame of the programme i.e. 16 semesters (12 semesters in case of lateral entry students).
4.	Pass Division	Student should secure CGPA, which is $4.0 \leq CGPA < 5.0$ within the time frame of the programme i.e. 16 semesters (12 semesters in case of lateral entry students).

- 16.5 The University will award degrees to the students who are evaluated and recommended by the Institute.

## 17 MALPRACTICE IN EXAMINATION

- 17.1 Malpractice in examination is an illegal activity and is prohibited.
- 17.2 Mobile phones are strictly prohibited in the examination hall.
- 17.3 Exchange of question paper and material like pen, pencil, sharpener, eraser, scale, calculator, etc., during examination is strictly prohibited.
- 17.4 Malpractice in examination is viewed very seriously. Malpractice includes oral communication between candidates, possessing forbidden material, mobile phones (switched off/on) etc.
- 17.5 Any malpractice or engaging in any improper conduct and violation of the examination code by the student during examinations is liable for the punishment as given below:

S. No	Nature of Malpractice	S. No	Punishment
1.	Taking help from others, consulting and or helping other examinees during the examination period inside the examination hall or outside it, with or without their consent or helping other candidates to receive help from anyone else.	a)	Cancelling the examination of the paper in which he / she indulged in malpractices.
2	If the examinee attempts to disclose his / her identity to the valuer by writing his / her Hall-Ticket Number at a place other than the place prescribed for it or any coded message including his / her name or addressing the valuer in any manner in the answer book.		Cancelling the examination of the paper in which he / she indulged in malpractices.
3.	Candidate is found in possession of forbidden material; relevant or not relevant <u>but not used</u> .	b)	Cancellation of the result of all examinations taken or proposed to be taken during that session. However, he/ she shall be promoted to next semester/ year as per the promotion rules in vogue.
4.	Destroying the material found in his / her possession or acting in any other manner with a view to destroying evidence.	c)	Cancellation of the result of all examinations taken or proposed to be taken during that session and prohibiting his/her admission to or continuation in any course of the Institute for a period of one year. The student will be eligible to appear for the next corresponding semester / year examination in the succeeding academic year.
5.	Smuggling main answer book / additional answer book / question paper / matter in to or out of the examination hall & Conspiring to interchange Hall Ticket Numbers.		-do-
6.	Candidate is found in possession of forbidden material, relevant or not relevant <u>but used</u> .		-do-
7.	In case of (i) impersonation, (ii) misbehavior with the invigilators/any person related to examination work, (iii) insertion of written sheets in different hand writing in the main/additional answer book, and (iv) creation of disturbance in and around the examination hall during or before the examination.	d)	Cancellation of the result of all examinations taken or proposed to be taken during that session and prohibiting his/her admission in to or continuation in any course of the Institute for a period of two years. Further, the candidate shall not be allowed to appear for any examination during the period of punishment.
8.	If a candidate is found guilty of malpractice in the improvement examination (after completion of course).	e)	Punishment will be awarded subject to the above rules and further, he/she will not be permitted to appear for further improvement examination.

**18 ROLL NUMBERS ALLOTMENT**

The Roll Number given to the student shall have a total 8 digits as follows: Ex: **M14SC007**

1. The first letter, to represent Masters (M.Tech.) degree programme.  
Ex: M for Masters programme
2. The next two numerical, to represent the year in which the student admitted into Isemester.  
Ex: 14 for 2014
3. The next two letters, to represent the concerned specialization to which the student belongs.  
Ex: SC for Structural Engineering & Construction
4. The last three numerical, to represent the three-digit roll number of the student.  
In general, a **student with roll number "M14SC007"** represents a **Masters student with a specialization of Structural Engineering & Construction admitted in the year 2014 bearing a roll number of 007.**

**19 AMENDMENTS**

Notwithstanding anything contained in this manual, the Academic Council of the Institute reserves the right to modify / amend the curricula, requirements and rules & regulations pertaining to its undergraduate programmes, without any further notice.

**KAKATIYA INSTITUTE OF TECHNOLOGY & SCIENCE, WARANGAL**  
**DEPARTMENT OF CIVIL ENGINEERING**  
 Scheme of Instruction and Evaluation for Two-Year Postgraduate Programme  
**M.TECH (STRUCTURAL ENGINEERING & CONSTRUCTION)**

**PRR 14**

**SEMESTER - I**

 P14SC106D. Machine Foundation

## P14SC101 NUMERICAL & STATISTICAL METHODS

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

- LO1. To introduce advanced methods of solving a linear system of equations*
- LO2 To introduce the methods of solving an ordinary/ partial differential equation numerically.*
- LO3 To introduce the statistical methods to apply to Engineering problems.*
- LO3 To introduce various probability distributions needed for a civil engineering*

### UNIT-I (9+3)

#### Linear System of Equations

Solution of Linear Systems – Direct Methods: Gauss-Jordon Elimination Method - Triangularization Method - Cholesky method - Partition Method, Iteration Methods: Jacobi iteration method - Gauss – Siedel Iteration Method - Relaxation Method

#### Eigen values of Matrices:

The eigen value problem; To determine largest eigen value by Power method

### UNIT-II (9+3)

#### Classification and Presentation of Data

Analysis and Treatment of Data, Measures of Central Tendency, Measures of Dispersion, Measures of Symmetry, Measures of Peakedness.

#### Regression Analysis

Correlation. Simple Linear Regression, Evaluation of Regression, Multiple Linear Regression

### UNIT-III (9+3)

#### Discrete Probability Distribution Functions:

Probability function, Mean and variance of a discrete probability distribution. Binomial, and Poisson distributions

#### Continuous Probability Distribution Functions:

Probability density function, Normal, Lognormal, Exponential, Gamma Distributions, Simple treatment of Joint Probability distributions.

### UNIT-IV (9+3)

#### Numerical Solution of Ordinary Differential Equations:

Introduction – Concept of a numerical solution of a differential equation- Initial value problems, Picards method, successive approximations, Euler Method, Runge-Kutta Methods. Predictor – corrector Methods; Adams – Moulton Method. Milne’s method, Cubic spline method.

**Numerical Solution of Partial Differential Equations:**

Second-order linear partial differential equations: Finite – difference approximations to Derivatives. Numerical solution of Laplace equation, Parabolic equation and Hyperbolic equation.

**Text Books:**

1. S.S. Sastry - *Introduction Methods of Numerical Analysis* – Prentice Hall of India (1998).
2. M.K.Jain, S.R.K. Iyengar and R.K. Jain., - *Numerical Methods for Scientific and Engineering Computations* –Wiley Eastern Limited (2001).
3. Hann C.T. – *Statistical Methods in Hydrology* – East West Press, New Delhi.

**Reference Books:**

1. M.K. Jain, “*Numerical Analysis for Scientists and Engineers*” SBW Publishers (1971).
2. Akai T.J. “*Applied Numerical Methods for Engineers*, John Wiley Inc., New York.
3. Charpa S.C and Canale R.P., “*Numerical Methods for Engineers with Personal Computer Applications*” Mc.Graw Hill Publishing Co.,
4. Alfredo H.S., Wilson H.Tang, “*Probability Concepts in Engineering, Planning and Design, Vol. I & II*”, Wiley International

**Course Learning Outcome:**

After completion of the course, the student will be able to

- CO1. Solve the system of linear equations by direct methods/ iterative methods.  
 CO2. Find numerical solution of a given ordinary differential equation by single step/ multi step numerical methods.  
 CO3. Solve a given a partial differential equation numerically using finite deference schemes.  
 CO4. Analyze data using statistical methods and probability distributions

**Course Articulation Matrix(CAM): P14SC101 NUMERICAL AND STATISTICAL METHODS**

CO		PO1	PO2	PO3	PSO1	PSO2
CO1	P14SC101.1	1	-	1	1	1
CO2	P14SC101.2	1	-	1	1	1
CO3	P14SC101.3	1	-	1	1	1
CO4	P14SC101.4	1	-	1	1	1
P14SC101		1	-	1	1	1

## P14SC102 LIMIT ANALYSIS OF REINFORCED CONCRETE STRUCTURES

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

- LO1 Review of design philosophies in RCC and design of reinforced concrete beams
- LO2 Give the concepts of moments in ductile members and design of columns
- LO3 Behaviors of reinforced concrete structures in shear and tension
- LO4 Design of reinforced concrete for the serviceability using limit state design

### UNIT –I (9+3)

#### Design philosophies.

Design philosophies of reinforced concrete structures, Review of working stress method, ultimate load method

#### Limit state design.

Review of limit state design, application of Limit state collapse in flexure, application to reinforced concrete beams.

### UNIT –II (9+3)

#### Moment-Curvature.

Deformation and ductility of members in flexure, Moment-Curvature relationships, Curvature of a member, theoretical Moment-Curvature determination.

#### Columns.

Behaviour of columns, Rectangular and circular columns – Interaction diagrams – uniaxial bending – design for Bi-axial bending, Design of slender columns.

### UNIT –III (9+3)

#### Shear

Behaviour of RC structure in shear, Principle mechanism of shear Resistance, Beam and Arch action, Mode of Shear failure, Shear failure mechanisms, shear strength of beam with and without shear reinforcement.

#### Torsion.

Behaviour of RC structure in torsion, Types of torsion, behaviour plain concrete beams under torsion, Skew bending and space truss analogy for RC members, combined bending and torsion, combined shear and torsion, design of beams in combined shear, bending and torsion as per IS code.

### UNIT –IV (9+3)

#### Serviceability.

Limit state of serviceability, Short term deflections, long term deflections, total deflections, – cracks in RC members, calculation of crack width.

**Yield line theory.**

Yield line theory of slabs, Behaviour of slabs up to failure, yield criteria, methods of analysis using virtual and equilibrium method, design of slabs.

**Text Books:**

2. Unnikrishnapillai & Devadas Menon, "Reinforced Concrete Design", Tata McGraw-Hill Education
3. Jain A. K., "Reinforced Concrete Design", Nem Chand Bros. Roorkee.
4. Shah H. J., "Reinforced Concrete Design", Charotar Publications, Anand.
5. Vargese P.C. "Limit State Design of Reinforced Concrete", PHI, Limited.

**Course Learning Outcomes:**

After completion of the course, the student will be able to-----

- CO1. understand the various philosophies of reinforced concrete design.  
 CO2. To design the beams and columns.  
 CO3. To analyse the design of reinforced flexural members and serviceability  
 CO4. understand the background of structural concrete code concepts and their design

## P14SC103 CONSTRUCTION PLANNING AND MANAGEMENT

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

- LO1: To make them understand the concepts of construction planning in project management.
- LO2: To develop ability to form a network diagram and analyze the cost for scheduling the project
- LO3: To understand the professional ethics, rules and responsibilities of a construction manager.
- LO4: To analyze the concept of management information system in construction industry.

## UNIT -I (9+3)

### Introduction

Project management and its importance, Structure of project, Management levels.

### Construction Planning

Basic Concepts in the Development of Construction Plans-Choice of Technology and Construction Method- Defining Work Tasks-Definition-Defining Precedence relationships among activities-Estimating Activity Durations-Estimating Resource Requirements for work activities-coding systems.

## UNIT -II (9+3)

### Scheduling and Networking

Scheduling calculations, Techniques – Critical Path Method & PERT- Line of balance, Usage of applications for Scheduling

### Cost analysis and control.

Direct cost, Indirect cost, Optimization of cost, forecasting budget, Resource allocation and leveling for limited and unlimited resources, Multi Resource allocation.

## UNIT -III (9+3)

### Construction Management

Importance of construction management, objectives and functions of construction management, Functions and Responsibilities of Construction Manager, Construction material management, Human factors in construction management.

### Decision Making Process.

Introduction to decision making process in construction industry, Benefit/cost analysis, Replacement analysis, Break even analysis.

## UNIT -IV (9+3)

### Management Information systems.

Introduction to management information systems, Need for management information

### Computer applications in Management.

Need for computer applications in construction industry and computer processing of information.

2. Cleland D.I. & Ireland L.R., "Project management and strategic design and Implementation" 4<sup>th</sup> Edn., Mc-Graw-Hill, New York

**Course Learning Outcomes:**

After completion of the course, the student will be able to

- CO1. Identify desirable characteristics of effective project manager.  
 CO2. Develop and schedule the project on/before stipulated time.  
 CO3. Have greater insight into decision-making processes.  
 CO4. Know the modern computer applications in project management.

## P14SC104 STRUCTURAL DYNAMICS

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives

LO1 The course is aimed at making students understand the working principles of dynamic loads and dynamic response of functions.

LO2 Giving students the concepts of single degree and multi degree freedom

Vibration systems with and without damping and the solutions to the multi degree freedom Systems using different iteration methods.

LO3 The students will also be exposed to continuous systems and numerical evaluation of dynamic response.

LO4 The students will be able to analyze various degree of freedom systems.

### UNIT – I (9+3)

#### Introduction:

Types of dynamic loads, Basic background of methods available and motivation for structural dynamics.

#### Dynamics of Single Degree-of-Freedom Structures:

Dynamic equation of equilibrium, free vibration of single degree of freedom systems, Forced vibration: harmonic and periodic loadings, Dynamic response functions, force transmission and vibration isolation, SDOF response to arbitrary functions.

### UNIT –II (9+3)

#### Numerical Evaluation of Dynamic Response of SDOF Systems:

Time domain analysis: finite difference methods, Frequency domain analysis: basic methodology.

#### Earthquake Response of SDOF Systems:

Earthquake excitation, response history and construction of response spectra, Response spectrum characteristics, tripartite plot, and design spectrum.

### UNIT– III (9+3)

#### Multi Degree of Freedom Systems - Basics:

Dynamic equations of equilibrium, static condensation, Symmetric plan and plan-asymmetric systems.

#### Free Vibration Response of MDOF Systems:

Undamped systems: natural modes and their properties, Numerical solution for the eigenvalue problem, Solution of free vibration response for undamped systems, Free vibration analysis of systems with damping.

#### UNIT - IV (9+3)

##### **Dynamic Analysis of Linear MDOF Systems:**

Introduction, modal analysis, Response-history for earthquake excitations using modal analysis, Response spectrum analysis for peak responses, Concept of Caughey damping as a general type of proportional damping.

##### **Generalized Single Degree of Freedom Systems:**

Basic concepts, mass-spring system, lumped mass systems, Systems with distributed mass and elasticity, Rayleigh's method, shape function selection.

##### **Text Books:**

1. "Structural Dynamics - Theory & Computations"- Mario Paz, Van Nostrand Co., Inc., 1980.
2. "Vibration problems in Engineering" Timoshenko Van Nostrand Co., Inc.,1955.
3. "Introduction to Structural Dynamics" Biggs McGraw Hill Book Co. 1975
4. "Dynamics of Structures" Clough & Penzien McGraw Hill Book Co., 1975
5. "Dynamics of structures" Hurty and Rubinstein
6. "Dynamics of structures" A.K. Chopra - Prentice Hall - 1996
7. I.S: 1893 - 2002, Code of practice for Earthquake resistant design of structures.

##### **Course Learning Outcome:**

- C01. At the end of the course the students will be able to analyze structures for dynamic action.
- C02. Memorize various concepts of single degree of freedom and multi degree of freedom systems with and without damping.
- C03. Memorize continuous systems and analyze numerical evaluation of dynamic response.
- C04. Analyze various degree of freedom systems.

## P14SC105A ADVANCED ANALYSIS OF STRUCTURES

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

Teaching Scheme:

L	T	P	C
3	1	-	4

Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives: The objectives of the course is to**

*LO1: Give review of flexibility matrix method and its application to continuous beam.*

*LO2: Analyze the rigid and pin jointed frames using flexibility method.*

*LO3: Give review of stiffness matrix method and its application to continuous beam.*

*LO4: Analyze the rigid and pin jointed frames using stiffness method.*

### Unit-I (9+3)

#### Flexibility matrix method

Basics, Introduction, Review of matrix algebra, Force method, Basic concepts, Internal forces, external loads and redundant, Relation between internal forces and deformation, Determination of static indeterminacy for different types of structures.

#### Continuous Beams

Determination of redundant forces, various load conditions for continuous beams with and without settlement of supports.

### UNIT II (9+3)

#### Rigid jointed frames

Application of Flexibility method rigid jointed plane frames.

#### Pin Jointed structures

Application of Flexibility method to pin jointed and stresses due to lack of fit.

### UNIT III (9+3)

#### Stiffness matrix method

Basics, Introduction stiffness matrix method, kinematic indeterminacy, Determination kinematic indeterminacy for different types of structures.

#### Analysis of Continuous Beams – Stiffness Method

Determination of unknown displacements, various load conditions for continuous beams with and without settlement of supports.

### UNIT IV (9+3)

#### Analysis OF frames – Stiffness method

Application of Stiffness method rigid jointed plane frames.

#### Analysis OF Trusses – Stiffness method

Application of Stiffness method to pin jointed trusses.

**Text Books:**

1. Weaver & Gere, "Matrix Analysis of Framed Structures", CBS Publishers & Distributors, Delhi.
2. Pandit & Gupta, "Matrix Analysis of Structures", Tata McGraw-Hill, New Delhi.
3. Bhavikatti S.S., "Structural Analysis Vol. II", Vikas Publishing Company Limited, New Delhi.
4. Zeinkiwiez, O.C., "Finite Element Method", Mc Graw Hill Co. Ltd. New York.

**Course Learning Outcome:**

- CO1. Able to analyze the continuous beam using flexibility method.  
 CO2. Can analyze the rigid and pin jointed frames flexibility method.  
 CO3. Able to analyze the continuous beam using stiffness method.  
 CO4. Can analyze the rigid and pin jointed frames stiffness method.

## P14SC105B REPAIRS AND REHABILITATION OF STRUTURES

Class: M.Tech. I Semester

Branch: Structural Engg. & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

LO1: Nondestructive tests on concrete

LO2: Students to investigate the cause of deterioration of concrete structures.

LO3: To strategize different repair and rehabilitation of structures.

LO4: To evaluate the performance of the materials for repair.

### UNIT-I (9+3)

#### Introduction

Cause of deterioration of concrete structures, Diagnostic methods & analysis, preliminary investigations.

#### Quality assurance

Using NDT, load testing, corrosion mapping, core drilling and other instrumental methods  
Quality assurance for concrete construction as built concrete properties strength, permeability, thermal properties and cracking.

### UNIT-II (9+3)

#### Influence on Serviceability and Durability

Effects due to climate, temperature, chemicals, wear and erosion, Design and construction errors, corrosion mechanism, Effects of cover thickness and cracking, methods of corrosion protection, corrosion resistant steels, coatings, cathodic protection.

#### Retrofitting

Introduction & Principles, Retrofitting Procedure for building Structures, Retrofitting of RC Beams and Slabs, Concrete Column Retrofitting

### UNIT-III (9+3)

#### Maintenance and Repair Strategies

Definitions: Maintenance, repair and rehabilitation, Facets of Maintenance importance of Maintenance Preventive measures on various aspects.

#### Inspection and Assessment

Inspection, Assessment procedure for evaluating a damaged structure causes of deterioration - testing techniques.

## UNIT-IV (9+3)

### Materials for Repair

Techniques for Repair: Rust eliminators and polymers coating for rebar during repair foamed concrete, mortar and dry pack, Guniting and Shotcrete Epoxy injection, Mortar repair for cracks, shoring and underpinning.

### Examples of Repair to Structures

Repairs to overcome low member strength, Deflection, Cracking, weathering wear, fire, marine exposure, engineered demolition techniques for dilapidated structures - case studies

### Text Books:

1. Sidney, M. Johnson “Deterioration, Maintenance and Repair of Structures”.
2. Denison Campbell, Allen & Harold Roper, “Concrete Structures – Materials, Maintenance and Repair”- Longman Scientific and Technical
3. R.T.Allen and S.C. Edwards, “Repair of Concrete Structures” Blakie and Sons
4. Raiker R.N., “Learning for failure from Deficiencies in Design, Construction and Service”, R&D Center (SDCPL)
5. Xilin LU “Retrofitting Design of Building Structures” CRC Press Taylor & Francis Group

### Course Learning Outcomes:

On completion of this course, students are able to

- CO1. Understand the cause of deterioration of concrete structures.
- CO2. Design and develop analytical skills.
- CO3. Summarize the principles of repair and rehabilitation of structures
- CO4. Understands the concept of Serviceability and Durability.

P14SC105B		2	2	2	2	2

## P14SC105B REPAIR AND REHABILITATION OF STRUCTURES

Class: M.Tech. I Semester

Branch: Structural Engg. & Construction

Teaching Scheme:

L	T	P	C
3	1	-	4

Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

LO1: To provide thorough understanding on cement and cement-composite materials.

LO2: Understand the Stress –Strain and mechanical behavior of composite materials.

LO3: Understand various cement composites and their construction techniques

LO4: Understand the behavior of FRC and ferrocement.

### UNIT-I (9+3)

#### Introduction

Classification and characteristics of composite materials – basic terminology – advantages.

#### Classification of Composites

Various types of composites, Classification based on Matrix Material: Organic Matrix Composites (Polymer matrix composites (PMC)/Carbon Matrix Composites or Carbon-Carbon Composites, Metal Matrix composites (MMC), Ceramic Matrices composites (CMC); Classification based on reinforcements: Fiber Reinforced Composites/Fiber Reinforced Polymer (FR P) Composites, Laminar Composites, Particulate Composites

### UNIT-II (9+3)

#### Stress-Strain Relations

Orthotropic and anisotropic materials – engineering constants for orthotropic materials – restrictions on elastic constants plane stress problem biaxial strength theories for an orthotropic lamina.

#### Mechanical Behavior

Mechanics of materials approach to stiffness – determination of relations between elastic constants. Elasticity approach to stiffness – bounding techniques of elasticity – exact solutions

### UNIT-III (9+3)

#### Cement Composites

Types of cement composites – terminology – constituent materials and their properties.

#### Construction Techniques for Composites

Construction techniques for fibre reinforced concrete, Ferrocement, SIFCON, Polymer concretes – preparation of reinforcement – casting and curing.

## UNIT-IV (9+3)

### Mechanical Properties of Cement Composites

Behavior of ferrocement, fiber reinforced concrete in tension, compression, flexure, shear, fatigue and impact, durability and corrosion.

### Application of Cement Composites

FRC and Ferrocement – housing – Water storage – Boats and miscellaneous structures.

#### Text Books:

1. Robert Jones, *Mechanics of composite*,
2. R.P., Pama, *Ferrocement – Theory and Applications, International Ferrocement Information Centre, Bangkok.*
3. Balaguruswamy, *Fibre Reinforced Concrete*
4. R.N. Swamy, *New Engineering Materials*

#### Course Learning Outcomes:

- CO1. Able to explain various cement and cement-composite materials.  
CO2. Able to analyze the Stress –Strain and mechanical behavior of composite materials.  
CO3. Able to identify types of cement composites and their construction techniques  
CO4. Able to analyze the behavior of FRC and ferrocement.

## P14SC105D PAVEMENT ANALYSIS AND DESIGN

**Class: M.Tech. I-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
3	1	-	4

**Examination Scheme:**

Continuous Internal Evaluation:	40 marks
End Semester Exam	60 marks

**Course Learning Objectives:**

LO1: To Understand various aspects of pavement analysis

LO2: Provides the knowledge about the design of both pavements as per IRC, AASHO.

LO3: Understanding the underlying principles relevant to construction of pavements.

LO4: Understand the significance of maintenance of pavements.

### UNIT –I (9+3)

#### Introduction

Types of pavement-factors affecting design of pavement-wheel loads-ESWL concept-tyre pressure- contact pressure- material characteristics.

#### Stress analysis in pavements

Stresses in flexible pavements- Boussinesq two-layer system- Burmister theory for pavement design. Stresses in rigid pavement Stresses due to friction - stresses due to loads.

### UNIT –II (9+3)

#### Flexible Pavement Design

CBR Method- IRC Method- AASHO Method.

#### Rigid Pavement Design

IRC method of design-Types of joints- Use of Tie bars and Dowell bars.

### UNIT –III (9+3)

#### Pavement mix design

Requirements of mix design- Marshall method of Bituminous mix design.

#### Machinery for Construction of Bituminous Roads:

Bitumen boiler- sprayer, pressure distributor, hot-mix plant, cold-mix plant, tipper trucks, mechanical paver or finisher, rollers. Mastic asphalt. Introduction to various IRC and MORTH specifications.

### UNIT –IV (9+3)

#### Construction of other types of pavements:

Reinforced cement concrete pavements- prestressed concrete pavements- roller compacted concrete pavements and fibre reinforced concrete pavements.

#### Highway maintenance

Need for highway maintenance- pavement failures both flexible and rigid -types and causes- pavement evaluation-Benkleman Beam method-strengthening of existing pavements-overlays

**Text Books:**

1. Khanna and Justo, "Highway Engineering", Nem Chand and Bros., Roorkee.
2. Yoder and widzorac, "Principles of Pavement design" John willey & sons.
3. Peurifoy, R.L., and Clifford, JS "Construction Planning Equipment and Method" McGraw Hill Book Co. Inc.
4. MoRTH 'Specifications for Roads and Bridges Works' Indian Roads Congress
6. "Bituminous materials in Road Construction", HMSO Publication
7. IRC-37, IRC-58

**Course Learning Outcomes :**

After completion of the course, the student will be able to

- CO1. Understand various methods of design for both flexible and rigid pavements.  
 CO2. Know the evaluation of pavement strength.  
 CO3. Recognize the various types of pavement distress and suggest remedial measures.  
 CO4. Understand various techniques for the maintenance of pavements.

## P14SC106A ADVANCED CONCRETE TECHNOLOGY

**Class: M.Tech. I-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
3	1	-	4

**Examination Scheme:**

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

- LO1: The basic principle of mix-designing of various types of concretes*
- LO2: Provides a detailed overview of various materials used in concrete.*
- LO3: Behavior of various materials in concrete.*
- LO4: Durability concepts of concrete.*

### UNIT – I (9+3)

**High Performance and High Strength Concrete:**

Properties of aggregates in high performance concrete, aspects of high performance concrete in the fresh state and of hardened, durability of HPC, The future of HPC

**Durability:**

Causes of inadequate durability, Diffusion, Absorption, Water permeability - Air and vapour Permeability, Carbonation, Acid and sulphate attack, Efflorescence, Disruption by alkali silica reaction-preventive measures Abrasion, erosion, cavitation and types of cracking.

### UNIT– II (9+3)

**Ferrocement:**

Ferrocement Technology, Application, Constituents of ferrocement, Construction Process, preparation of ferrocement, ferrocement repair and methodology.

**Fibre Reinforced concrete:**

Need for the Fibre Reinforced Concrete (FRC)- Mechanism of FRC. Types of fibres, Behaviour of FRC in tension, compression, flexure, shear, Fatigue, impact and torsion. Durability - corrosion.

### UNIT– III (9+3)

**Sustainable Concrete:**

Concrete with different cementitious materials - Flyash concrete, GGBS concrete and Silica fume. Strength development-Hydration –Durability of above concrete.

**Special Concrete:**

Light weight concrete, Strength of Light Weight Aggregate- Aspects – Durability, Thermal Properties. Cellular concrete and No fines concrete

## UNIT- IV (9+3)

### Self Compacting Concrete:

Introduction, History of SCC, Development of SCC, Characteristics and behavior of SCC, Tests on SCC as per EFNARC specifications and Application of SCC.

### Self Curing Concrete:

Introduction, Need and Development of Self curing concrete, Characteristics, behavior and application of Self curing concrete, Tests on self Curing Concrete

### Text Books:

1. Neville A.M., "Properties of Concrete", 4<sup>th</sup>Edn., English Language Book Society /Longman Pub., 2010.
2. Dr. B.N. Divakar., "Ferrocement Technology"
3. StanelyAbercromhie., Ferrocement
4. Mehta P.K. and Paulo J.M.M. "Concrete – Micro Structure - properties and Material".

### Course Learning Outcomes:

After completion of the course, the student will be able to

- CO1. Understand principle of mix-designing of various types of concretes.
- CO2. Understand different materials used in concrete.
- CO3. Understand behavior of various materials in concrete.
- CO4. Understand durability concepts of concrete.

## P14SC106B STRUCTURAL HEALTH MONITORING

**Class: M.Tech. I-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
3	1	-	4

**Examination Scheme:**

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

*LO1: NDT assessment, static field testing and loading methods.*

*LO2: Dynamic field testing methods.*

*LO3: Hardware Components required for data acquisition system.*

*LO4: Various techniques of structural health monitoring.*

### UNIT - I (9+3)

**Introduction**

Definition of SHM, Motivation for structural health monitoring, Assessment by NDT equipments.

**Static testing:**

Static field testing- types of static tests- loading methods, Behavioral / Diagnostic tests - Proof tests, Static response measurement – strain gauges, LVDTs, dial gauges- case study

### UNIT- II (9+3)

**Dynamic Field Testing**

Types of dynamic tests, Stress history data, and Dynamic load allowance tests, ambient vibration tests.

**Methods of testing**

Forced Vibration Method, Dynamic response methods, Impact hammer testing, Shaker testing, Periodic and continuous monitoring.

### UNIT - III (9+3)

**Data acquisition**

Static data acquisition systems, Dynamic data acquisition systems.

**Components:**

Components of Data acquisition system, Hardware for Remote data acquisition systems.

### UNIT - IV (9+3)

**Remote structural health monitoring:**

Remote Structural Health Monitoring - Importance and Advantages – Methodology.

**Technique's of health monitoring:**

RF/PSTN/GSM/Satellite Communications, Networking of sensor, Data compression technique, Case Studies.

**Text Books:**

1. Daniel Balageas, Claus-Peter Fritzen, Alfredo Güemes, “Structural Health Monitoring”, John Wiley and Sons, 2006.
2. Douglas E Adams, “Health Monitoring of Structural Materials and Components-Methods with Applications”, John Wiley and Sons, 2007.
3. J.P. Ou, H.Li and Z.D. Duan, “Structural Health Monitoring and Intelligent Infrastructure Vol-1”, Taylor and Francis Group, London, U.K, 2006.

**Course Learning Outcomes:**

After completion of the course, the student will be able to

CO1. NDT, static field testing methods.

CO2. Dynamic field testing methods.

CO3. Components of data acquisition system.

CO4. Techniques of structural health monitoring.

**Course Articulation Matrix(CAM): P14SC106B STRUCTURAL HEALTH MONITORING**

## P14SC106C BUILDING SERVICES & MAINTAINANCE MANAGEMENT

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 Marks
End Semester Exam:	60 Marks

### Course Learning Objectives:

LO1: Identify various building services and their functional requirements

LO2: Understand various fire fighting systems, building transport systems and their planning

LO3: Understand and plan various plumbing and water supply system.

LO4: Understand miscellaneous services like air conditioning, telecom, LAN and their maintenance.

### UNIT –I (9+3)

#### Introduction and Importance

Importance of building services, type of services required to keep facility usable,

#### Planning of services

Organization structures of services management. Role and administrative functions of supervisors, functional planning in building.

### UNIT –II (9+3)

#### Fire Fighting

Basic requirement of the works for fighting system, various components of the fire fighting system. Maintenance required of the system, fire fighting in high-rise buildings, commercial/industrial complexes. Public buildings, checklist for fire safety

#### Lifts/Elevators, Escalators

Legal formalities for elevators, various types of lifts, working mechanisms of lift and escalators. Indian standard codes for planning & installations of elevator, inspection & maintenance of lifts

### UNIT –III (9+3)

#### Plumbing Services

Basics of Plumbing systems. Requirement of Plumbing works, Agency, Activity flow chart for plumbing work. Quality, checking of materials

#### Water Supply System

Water supply and distribution system in high-rise building & other complexes, pumps and pumping mechanisms. Operation & maintenance of fittings & fixtures of water supply & sanitary. Do's & Don'ts for water pipe networks

### UNIT –IV (9+3)

#### Building Services and Maintenance

Telecommunication network, computer network LAN, Electrical network & appliances. Basics of single phase & three phase electrification, precautions and safety measures during electrification. Indian standard codes for electrical appliances & wiring operations & maintenance of network & appliances. Landscaping & Horticulture. Building maintenance management, applications of computer in service management.

**Air-Conditioning and Heating:**

Flowcharts of air conditioning & heating. Centralised systems, monitoring and working of the equipments, Checklist of inspection, Performance testing.

**Text Books:**

1. IVOR H. Seeley, "Building Technology", Mac Millian.
2. Chudley, "Building Finishes, fittings and domestic service", Longman Scientific and Technical book"
3. "Hand book for Building Engineers in Metric systems", NBC, New Delhi, 1968
4. Fred Hall, "Building Services & Equipment", Longman Scientific and Technical.
5. Lee Smith, Harry Slecter, "Plumbing Technology, Design and installation", Delmar Publisher INC.
6. Fred Hall, "Plumbing Cold water supplies, Drainage and Sanitation" Longman Scientific & Technical.
7. Roger Greeno, "Building Services, Technology and Design" Longman.

**Course Learning Outcomes:**

After completion of the course, the student will be able to

CO1: Describe various building services and their functional requirements

CO2: Explain various fire fighting systems, building transport systems and their planning

CO3: Plan various plumbing and water supply system.

CO4: Identify and maintenance of miscellaneous building services like air conditioning, telecom, LAN.

## P14SC106D MACHINE FOUNDATIONS

Class: M.Tech. Semester: I

Branch: Structural Engineering & Construction

Teaching Scheme:

Examination Scheme:

L	T	P	C
3	1	-	4

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### **Course Learning Objectives:**

- LO1: To analyze the dynamic behavior of foundations.
- LO2: To Select foundation for dynamic loading
- LO3: Design foundation for reciprocating machines
- LO4: Design foundation for rotary & impact machines

### **UNIT –I (9+3)**

#### **General Principles of Machine Foundation**

Introduction, Types of Machines and Foundations, General requirements, Permissible Amplitude.

#### **Machine Foundation Design**

Allowable soil pressure, Permissible stress of concrete and steel, Permissible stresses of Timber.

### **UNIT –II (9+3)**

#### **Foundations of Reciprocating Machines**

Modes of vibration of a rigid foundation block, methods of analysis, linear elastic weightless spring methods, elastic half space method, and effect of footing shape on vibratory response.

#### **Design of Foundations of Reciprocating Machines**

Dynamic response of embedded block foundations, soil mass participating in vibrations, design procedure for a block foundation.

### **UNIT –III (9+3)**

#### **Foundations of Impact Machines:**

Introduction, Dynamic analysis; single degree freedom system, Multi degree freedom system.

#### **Design procedures for foundations of Impact Machines**

Determination of initial velocity of hammer, stress in the pad, stresses in the soil, design procedure for a hammer foundation.

### **UNIT –IV (9+3)**

#### **Foundations of Rotary Machines**

Introduction, special considerations, design criteria, loads on a turbo generator foundation, methods of analysis and design, resonance method, amplitude method, combined method, three dimensional analysis.

**Vibration isolation and screening:**

Introduction, force isolation, motion isolation, screening of vibrations by use of open trenches, passive screening by use of pile barriers, problems.

**Text Books:**

1. Srinivasulu, P. And Vaidyanathan, C. V., "Handbook of Machine Foundations" Tata McGraw Hill, New Delhi, 2001
2. Prakash Shamsheer and Puri Vijay K, "Foundations for Machines, Analysis and Design" John Wiley and Sons, USA, 1988.

**Course Learning Outcomes:**

After completion of the course, the student will be able to

CO1. Understand the dynamic behavior of foundations.

CO2. Select foundation for dynamic loading

CO3. Design machine foundations

CO4. Identify vibration isolation techniques

## P14SC107 ADVANCED CONCRETE TECHNOLOGY LABORATORY

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
-	-	3	2

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

- LO1: The effects of water cement ratio on the influence the behavior of concrete
- LO2: The effects of aggregate ratio on the influence the behavior of concrete
- LO3: The correlations between the various strengths are also established
- LO4: The variance of mix design among various codes

### List of Experiments

1. Study of the effect of water/cement ratio on workability of concrete.
2. Study of the effect of water/cement ratio on strength of concrete.
3. Effect of aggregate/cement ratio on strength of concrete
4. Effect of fine aggregate/coarse aggregate ratio on strength of concrete
5. Correlation between cube strength, cylinder strength.
6. Correlation between split tensile strength and modulus of rupture.
7. Study of Mix design using IS code method.
8. Study of Mix design using ACI method.
9. Non-Destructive testing of concrete
10. Effect of pozzolonic materials on strength of concrete

### Text Books:

1. Concrete technology- Neveli – Pearson Publishers, 2000
2. Concrete Technology – M.S. Shetty – S. Chand and Co., 2001

### Course Learning Outcomes:

- After completion of the course, the student will be able to
- CO1. Understand how water cement ratio influence the behavior of concrete
  - CO2. Understand how water aggregate ratio influence the behavior of concrete
  - CO3. Understand the influence of various parameters on strength of concrete.
  - CO4. Understand variance of mix design among various codes

Class: M.Tech. I-Semester

Branch: Structural Engineering & Construction

#### Teaching Scheme:

L	T	P	C
-	-	3	2

#### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

#### Course Learning Objectives:

- Develop programme for analysis of structural elements.
- Design various civil engineering basic structural elements.
- Apply various software's in civil engineering.
- Design special structures.

#### List of Experiments

1. Preparing and running complete programs in C for analysis of beams
2. Preparing and running complete programs in C for analysis determinate frames
3. Analysis of concrete elements using STRAP/STAD-PRO.
4. Design of concrete elements using STRAP/STAD-PRO.
5. Analysis of Rolled Steel elements using STRAP/STAD-PRO.
6. Design of Rolled Steel elements using STRAP/STAD-PRO.
7. Exercise on construction engineering and management problems using PRIMA VERA
8. Analysis of structures for moving loads using STRAP/STAD-PRO.
9. Analysis of roof truss using STRAP/STAD-PRO.
10. Analysis of water tanks using STRAP/STAD-PRO.

#### Text Books:

1. C.S. Krishnamoorthy & S.Rajeev, "Computer Aided Design", Narosa Publications.
2. Boyd C. Panbou, "Computer applications in Construction", Tata McGraw-Hill Co. Ltd.

#### Course Learning Outcomes:

After completion of the course, the student will be able to

CO1: Write a C- programme for analysis of structural elements.  
CO2: Design basic structural elements.  
CO3: Various software's in civil engineering.  
CO4: Special structures manually and using STAAD PRO.

**P14SC109 SEMINAR**

**Class: M.Tech. I-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
-	-	-	2

**Examination Scheme:**

Continuous Internal Evaluation:	--
End Semester Exam:	100 marks

- 1 There shall be only Continuous Internal Evaluation (CIE) for Seminar, which includes Report Submission & Presentation
- 2 A teacher will be allotted to a student for guiding in
  - (i) selection of topic
  - (ii) report writing
  - (iii) Presentation (PPT) before the DPGRC on a pre notified date

**Course Learning Outcomes:**

After completion of the course, the student will be able to  
CO1: demonstrate creativity in the design of components, systems or processes of their program of study  
CO2: design an innovative product by applying current knowledge and adopt to emerging applications of engineering & technology  
CO3: work cooperatively with others to achieve shared goal by motivating team-mates with a clear sense of direction, values and ethics,  
CO4: write concisely & convey meaning in a manner appropriate to different readers and verbally express ideas easily understood by others who are unfamiliar with the topic

## P14SC201 THEORY OF ELASTICITY

Class: M.Tech. II-Semester

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam :	60 marks

### Course Learning Objectives:

LO1: Explain the idea of strain and stress tensors, strain deformation relationships for finite and small deformations,

LO2: Develop ability to formulate a stress analysis problem in two dimensions and three dimensions based on compatibility conditions, equilibrium equations, and constitutive properties of orthotropic and isotropic elastic materials.

LO3: Introduce concept of Airy's stress functions for 2-D plane stress and plane strain problems in Cartesian and cylindrical coordinate systems.

LO4: Give an idea about stress concentration, torsion.

### UNIT -I (9+3)

#### Fundamentals of theory of elasticity:

Definition and notation of stress. Components of stress and strain. Generalized Hooke's law. Stress and strain in three dimensions. Stress components on an oblique plane. Transformation of stress components under change of co-ordinate system.

#### Analysis of Stress and Strain in Three Dimensions

Principal stresses and principal planes. Stress invariants. Mean and deviator stress. Strain energy per unit volume. Octahedral shear stress. Strain of a line element. Principle strains. Volume strain.

### UNIT -II (9+3)

#### Two Dimensional problems in rectangular coordinates

Plane stress and plane strain situations. Equilibrium equations. Compatibility equations. St. Venant's principle. Uniqueness of solution. Stress components in terms of Airy's stress functions.

#### Applications of 2 Dimensional problems in rectangular coordinates

Applications to cantilever, simply supported and fixed beams with sample loading.

### UNIT -III (9+3)

#### Two Dimensional Problems in Polar Coordinates

Equilibrium equations. Stress Strain Components. Compatibility equation. Applications using Airy's stress functions in polar co-ordinates for stress distributions symmetric about an axis.

#### Applications of 2 Dimensional problems in polar coordinates

Effect of hole on stress distribution in a plate in tension. Stresses due to load at a point on a semi-infinite straight boundary. Stresses in a circular disc under diametrical loading

## UNIT -IV (9+3)

### Torsion

Torsion of various shapes of bars, Stress function method of solution applied to circular and elliptical bars. Prandtl's membrane analogy

### Solution to torsion problems in elasticity

Solution of torsion of rectangular bars by (i) Raleigh Ritz method and (ii) Finite difference method.

### Text Books:

1. Timoshenko and Goodier, "Theory of Elasticity", 3<sup>rd</sup> Ed., McGraw Hill 2010.
2. C.T. Wang, "Applied Elasticity" McGraw Hill,
3. L.S.Srinadh, "Advanced Mechanics of Solids" TMH Publishing Company Limited, New Delhi
4. Sadhu Singh, "Theory of Elasticity", Khanna Publishers, New Delhi.

### Course Learning Outcomes:

*After completion of the course, the student will be able to*

*CO1: The students will be exposed to the principles of elasticity theory for developing simple and quick estimates of stress and displacement fields for use in elastic stress analysis.*

*CO2: formulate stress analysis problem in two dimensions and three dimensions*

*CO3: There is scope for developing solutions to various stress analysis problems.*

*CO4: The underlying mathematical theory of elasticity provides a rich framework for the study of various applications in practical problems.*

### Course Articulation Matrix(CAM): P14SC201 THEORY OF ELASTICITY

## P14SC202 FINITE ELEMENT METHOD

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
3	1	-	4

**Examination Scheme:**

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

*LO1: To show how the potential energy approach can be used to both derive the stiffness matrix for a spring and solve a spring assemblage problem.*

*LO2: To define symmetry and describe the use of symmetry to solve a problem.*

*LO3: To demonstrate beam analysis using the direct stiffness method.*

*LO4: To derive the axisymmetric element stiffness matrix, body force, and surface traction equations.*

### UNIT-I (9+3)

#### Introduction

Brief History, Introduction to Matrix Notation, Role of the Computer, General Steps of the Finite Element Method, Applications of the Finite Element Method, Advantages of the Finite Element Method.

#### Introduction to the Stiffness (Displacement) Method

Definition of the Stiffness Matrix, Derivation of the Stiffness Matrix for a Spring Element, Example of a Spring Assemblage, Assembling the Total Stiffness Matrix by Superposition, Boundary Conditions, Potential Energy Approach to Derive Spring Element Equations.

### UNIT-II (9+3)

#### Development of Truss Equations

Derivation of the Stiffness Matrix for a Bar Element in Local Coordinates, Selecting Approximation Functions for Displacements, Transformation of Vectors in Two Dimensions, Global Stiffness Matrix for Bar Arbitrarily Oriented in the Plane, Computation of Stress for a Bar in the x-y Plane, Solution of a Plane Truss, Transformation Matrix and Stiffness Matrix for a Bar in Three-Dimensional Space, Use of Symmetry in Structure, Inclined, or Skewed, Supports.

#### Application of Truss Equations

Potential Energy Approach to Derive Bar Element Equations, Comparison of Finite Element Solution to Exact Solution for Bar, Galerkin's Residual Method and Its Use to Derive the One-Dimensional Bar Element Equations Other Residual Methods and Their Application to a One-Dimensional Bar Problem.

### UNIT-III (9+3)

#### Development of Beam Equations

Beam Stiffness, Example of Assemblage of Beam Stiffness Matrices, Examples of Beam Analysis Using the Direct Stiffness Method, Distributed Loading, Comparison of the Finite Element Solution to the Exact Solution for a Beam, Potential Energy Approach to Derive Beam Element Equations, Galerkin's Method for Deriving Beam Element Equations.

**Frame and Grid Equations**

Introduction, Two-Dimensional Arbitrarily Oriented Beam Element, Rigid Plane Frame examples, inclined or Skewed Supports—Frame Element, Grid Equations.

**UNIT-IV (9+3)****Development of the Plane Stress and Plane Strain Stiffness Equations**

Introduction, Basic Concepts of Plane Stress and Plane Strain, Derivation of the Constant-Strain Triangular Element Stiffness Matrix and Equations, Treatment of Body and Surface Forces, Explicit Expression for the Constant-Strain Triangle Stiffness Matrix Finite Element Solution of a Plane Stress Problem.

**Axisymmetric Elements & Isoparametric Formulation**

Introduction, Derivation of the Stiffness Matrix, Solution of an Axisymmetric Pressure Vessel, Applications of Axisymmetric Elements, Isoparametric Formulation of the Bar Element Stiffness Matrix, Isoparametric Formulation of the Plane Quadrilateral Element Stiffness Matrix.

**Course Learning Outcomes:**

*After completion of the course, the student will be able to*

CO1. *To assemble stiffness matrices into a global stiffness matrix.*

CO2. *To solve problems with inclined supports.*

CO3. *To derive the stiffness matrix and equation of grid analysis.*

CO4. *To determine the stiffness matrix and stresses for a constant-strain triangle element.*

## DESIGN OF CONCRETE BRIDGES

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

**Examination Scheme:**

L	T	P	C
3	1	-	4

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

LO1: Basics of bridge and design loads.

LO2: Analyse and design of slab, T - beam bridge and Girder bridges

LO3: Design of bridge bearing

LO4: Design of piers and abutment.

### UNIT-I (9+3)

#### Introduction

Types of bridges, materials for construction, codes of practice (Railway and Highway bridges), aesthetics, IRC loading standards.

#### Hydraulic design

Planning and layout of bridges, hydraulic design, geological and geo-technical considerations,

### UNIT-II (9+3)

#### Slab Bridge

Pigeaud's curves method for design of slab, Analysis of beams– Courbon's Method – Hendry Jaeger Method – Guyon and Massonet Method.

#### T-Bridge

Design of T-Beam bridge, design of Box Girder Bridges

### UNIT-III (9+3)

#### Bearings

Types and functions of bearings, bearing materials, design of elastomeric bearings,

#### Bridge Appurtenances

Expansion joints, design of joints railings, drainage system and lighting,.

### UNIT-IV (9+3)

#### Sub - Structure

Loads acting on substructure, design of pier and pier cap, design of shallow and deep foundations

#### Abutments

Design of caissons, abutments, retaining and wing walls

**Text Books:**

1. Krishnaraju N, "Design of Bridges", Oxford & IBH Publishing Co. Pvt. Ltd., New Delhi
2. Victor D.J, "Essentials of Bridge Engineering", Oxford & IBH Publishing Co. Pvt. Ltd., New Delhi.
3. Jagdish.T.R & Jairam.M.A., "Design of Bridge Structures", PHI Learning Pvt. Ltd.
4. Raina V.K., "Concrete Bridge Practice", Tata McGraw Hill Publishing Co. Ltd. New Delhi.
5. Swamisaran, "Analysis and Design of Sub Structures", Oxford & IBH Publishing Co. Pvt. Ltd., New Delhi.
6. Ponnuswamy S., "Bridge Engineering" Tata McGraw Hill Publishing Co. Ltd. New Delhi.
7. Wai-Fah Chen Lian Duan, "Bridge Engineering Handbook" CRC Press, USA.

**Course Learning Outcomes:**

After completion of the course, the student will be able to

- CO1. Classify bridge and loads acting on them  
CO2. To Design slab, T-beam and Girder bridges  
CO3. To Design bridge bearings  
CO4. To Design piers and abutments.

## P14SC204 CONSTRUCTION TECHNIQUES & EQUIPMENTS

Class: M.Tech. Semester: II

Branch: Structural Engineering & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### Course Learning Objectives:

LO1: Acquire knowledge about the prefabrication system in construction practice

LO2: Aware of the various construction techniques and the equipment needed for different types of construction activities.

LO3: Learn in analyzing the selection and utilization of equipment.

LO4: Hosting equipment and conveying equipment

### UNIT-I (9+3)

#### Pre-cast and Pre-fabricated Construction

Importance of and suitability pre-fabrication, Classification and scope. Advantages and disadvantages of pre-fabrication. Design principles of pre-fabrication system.

#### Prefabrication systems in residential buildings

Planning and modules and sizes of components in prefabrication, testing of components, Manufacturing and erection guide lines.

### UNIT-II (9+3)

#### Construction equipment

Need for mechanization in construction industry. Financing aspects of construction plants and equipment. Factors effecting selection of construction equipment.

#### Operating and Maintenance construction equipment

Operating the construction equipment, Equipment Management and maintenance characteristic performance and application to building process for Excavating and demolishing equipment: Shovels, scrapers, bull dozers.

### UNIT-III (9+3)

#### Drilling and Plant Equipments:

Piles and Pile Driving Equipments, Tunnel Boring Machine, Air Compressors, Asphalt Mix Production and Placement

#### Miscellaneous Equipments:

Compaction and Stabilization Equipments, Trucks and Hauling Equipments, Finishing Equipments, Blasting Rock

### UNIT-IV (9+3)

#### Hoisting equipment

Hoist winch, chains, and hooks, slings, various types of cranes- tower crane, mobile crane and derrick crane. Safety in crane operation.

### Conveying equipment

Various types of belts and conveyors. Concreting equipment: Concrete mixers, truck mixers, pneumatic Concrete placers, vibrators and Scaffolding

#### Text Books:

1. Peurify, R.L. (1996) "Construction, Planning, equipment and methods" McGrawHill Book Company, Inc. NY.
2. Mahesh Varma. (1997) "Construction Equipment, and its planning & Applications" Metropolitan Book Co. (P) Ltd., New Delhi, India.
3. U.K. Srivastava (1999) "Construction Planning and Management" Galgotia Publications Pvt., Ltd., New Delhi, India.
4. "National building code of India" BIS 2005

#### Course Learning Outcomes:

After completion of the course, the student will be able to

- CO1. Selection of appropriate construction equipment to tasks.  
CO2. Estimate equipment ownership and operating costs.  
CO3. Estimate and schedule activities using equipment productivity and cost data.  
CO4. Understand contemporary issues pertaining to construction methods, equipment usage and management.

## P14SC205A EARTHQUAKE RESISTANT DESIGN OF RCC STRUCTURES

M.Tech. Semester: II

Branch: Structural Engineering and Construction

Teaching Scheme:

L	T	P	C
3	1	-	4

Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### **Course learning objectives:**

LO1: To define common terminologies needed for earthquake engineering, name different standards of BIS regarding the earthquake resistant design of structures

LO2: Determine the horizontal seismic coefficient, design seismic base shear and distribution of design force,

LO3: To explain the need for ductility and ductile detailing of reinforcement in the earthquake resistant design of structures.

LO4: To understand the concept of structural and nonstructural units of a building.

### **UNIT-I (9+3)**

#### **Engineering seismology**

Earthquake phenomenon cause of earthquakes-Faults- plate seismic tectonics- waves- Terms associated with earthquakes-Magnitude/Intensity of an earthquake-scales- Energy released-

#### **Earthquake measuring instruments**

Seismoscope, Seismograph, Accelerograph- Characteristics of strong ground motions- Seismic zones of India.

### **UNIT - II (9+3)**

#### **Conceptual design**

Introduction-Functional planning-continuous load path-overall form-simplicity and symmetry-elongated shapes-stiffness and strength-Horizontal and Vertical tremors-Twisting of building.

#### **Introduction to earthquake resistant design**

seismic design requirements-regular and irregular configurations -basic assumptions-design earthquake loads-basic load combinations-equivalent lateral force method- response spectrum method.

### **UNIT -III (9+3)**

#### **Reinforced concrete Buildings**

Principles of earthquake resistant design of RC members- structural models for frame buildings- seismic methods of analysis- seismic design methods- IS code based methods for seismic design- seismic evaluation and retrofitting- Vertical irregularities- plan configuration problems.

#### **Masonry Buildings**

Introduction-elastic properties of masonry assemblage- Categories of masonry buildings- Behaviour of unreinforced and reinforced masonry walls- Behaviour of walls- Box action and

bands- Behaviour of infill walls- Improving seismic behaviour of masonry buildings- Load combinations and permissible stresses- seismic design requirements.

#### UNIT-IV (9+3)

##### Structural Walls

Strategies in the location of structural walls- sectional shape- variations in elevation- cantilever walls without openings Failure mechanism of non-structures-

##### Non-structural Elements

Effects of non-structural elements on structural system- Analysis of non- structural elements- prevention of non-structural damage- Isolation of non-structures.

##### Text Books:

1. "Earthquake Resistant Design of structures" - S. K. Duggal, Oxford University Press
2. "Earthquake Resistant Design of structures" Pankaj Agawal and Manish Shrikhande, PrenticeHall of India Pvt. Ltd.
3. "Seismic Design of Reinforced Concrete and Masonry Building" T Paulay and M.J.N. Priestly, John Wiley & Sons
4. "Masonry and Timber structures including earthquake Resistant Design" Anand.S.Arya, Nem Chand & Bros
5. "Earthquake -Resistant Design of Masonry Building" Miha Tomazevic, Imperial college Press.
6. "Earthquake Tips - Learning Earthquake Design and construction" CVR. Murty

##### Reference Codes:

1. IS:1893(part-1)-2002 "Criteria for Earthquake Resistant-Design of structures" BIS., New Delhi.
2. IS:4326-1993, "Earthquake Resistant Design and Construction of Building", Code of Practice B.I.S., New Delhi.
3. IS:13920-1993, "Ductile detailing of concrete structures subjected to seismic force" Guidelines, B.I.S., New Delhi.

##### Course student learning outcomes:

After completion of the course, the student will be able to,

CO1. Memorize the basic concepts of Earthquake Resistant Design of structures

CO2. Can apply the basic principles to design the structural elements in Earthquake resistant design of structures implementing codes for elastic design of structures.

CO3. Analyze the ductile detailing of reinforcement in the earthquake resistant design of structures.

CO4. Memorize the various strategies in structural and nonstructural component design.

## P14SC205B MANAGEMENT INFORMATION SYSTEMS

**Class: M Tech II Semester**

**Branch: Structural Engineering and Construction**

**Teaching Scheme**

L	T	P	C
3	1	-	4

**Examination Scheme**

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

*LO1: Get exposure to Management Information Systems, Strategic planning and control.*

*LO2: Understanding the methodology for decision making and models associated with it.*

*LO3: Analyze and design various systems of project management.*

*LO4: Understand the concepts relevant to risk and its controlling strategies.*

### UNIT- I (9+3)

**Introduction**

Introduction to management information system – Evaluation of MIS – Manager’s view of information – Strategic Planning.

**Management Control**

Using Information systems for competitive advantage – value chain model – Synergies –core competencies and Network based strategies.

### UNIT- II (9+3)

**Decision making**

Decision making and information systems – Simon’s model of Decision making.

**Optimization of decision making**

Criteria for Decision making – Decision support systems and expert systems.

### UNIT- III (9+3)

**System analysis**

Systems analysis and Design structured analysis prototyping system development life cycle feasibility.

**Design of the system**

Implementation and Evaluation – Systems project Management.

### UNIT- IV (9+3)

**Security and Ethical issues**

Security and Ethical issues in information systems.

**Risks analysis**

Risk and factors, Risk analysis, controls and threats

**Text Books:**

1. Robert Schultheis and Mary summer., “Management Information systems – The Managers view”, Tata Mc GrawHill, 2008
2. Kenneth C Laudon and Jane P Laudon ., “Management information Systems – Managing the Digital firm”, Pearson education, 2009.
3. Murthy SCV. , “Management information systems – Text and Applications” Himalaya publishing house, 2009.
4. Satya Sekhar GV, “Management information Systems”, Excel books, 2007.

**Course Outcomes:**

After completion of the course, the student will be able to

CO1. Discuss Management Information Systems, Strategic planning and control.

CO2. Illustrate the methodology for decision making and models associated with it.

CO3. Design various systems of project management.

CO4. Manage risks and its controlling strategies.

## P14SC205C LEGAL ISSUES IN CONSTRUCTION

**Class: M.Tech. II Semester**  
**Teaching Scheme**

L	T	P	C
3	1	-	4

**Branch: Structural Engineering & Construction**  
**Examination Scheme**

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives: The objectives of the course is to**

LO1: Get exposure to Indian Contract Act, Arbitration and Conciliation Act.

LO2: Understand the conditions of contract and its administration.

LO3: Understand the contract liability and productivity.

LO4: Manage bidding of tenders and documentation.

### UNIT-I (9+3)

#### **Introduction to Law of Contract**

Introduction and definition of Contract, Legal issues in contract – Indian contract Act and its provision

#### **Legal Liability**

Rights and Duties of Employees, Employers and other stakeholders considering Legal Liability.

### UNIT-II (9+3)

#### **Interpretation and conditions**

Post contract problems, contract interpretation, concealed conditions, termination of contract, claims and disputes

#### **Contract Administration**

Arbitration and settlement of disputes, force majeure, adjudication, arbitration and conciliation Act, alternate dispute resolutions, liquidated damages, actual damages, Risk Management in Construction Industry.

### UNIT-III (9+3)

#### **Professional Liability Considerations**

Contract Relationship and Liability, Sources of Potential Liability in Construction Industry.

#### **Construction Productivity**

Causes for various construction delays, Extension of time (EOT) and non-performance Legal Liability.

### UNIT-IV (9+3)

#### **Notice Inviting Tender**

Formation of Contract documents, Notice Inviting Tenders (NIT), Prequalification or Pre-evaluation.

#### **Preparing Bidding Documents**

Documents forming a contract, notice inviting tenders, types of contracts, stages of awarding contract, basic knowledge on general conditions of Contracts (domestic and FIDIC), importance of standards and codes in contract documents.

**Text Books:**

1. Patil, B.S., "Building and Engineering Contracts" Mrs. S.B. Patil, Pune.
2. Gajerai, G.T., "Law relating to Building and Engineering Contracts in India" Butterworths
3. Adrian, J.J., "Construction Productivity Improvement", Elsevier, New York

8. K.Waker A Teraih and Jose M.Grevarn., "Fundamentals of Construction Management & Organizations".
9. Govt of India, Central Public Works Department, "CPWD 7/8: General Conditions of Contracts."
10. "Professional Liability Considerations in Construction Industry" published by Cavnignac & Associates, 2002

**Course Learning Outcomes:**

After completion of the course, the student will be able to,

- CO1. Deliberate the sections of Indian Contract Act, Arbitration and Conciliation Act.  
 CO2. Manage the conditions of contract and its administration.  
 CO3. Mitigate the conditions of contract, liability and productivity.  
 CO4. Process bidding of tenders and documentation.

## P14SC205D EMBANKMENT CONSTRUCTION

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
3	1	-	4

**Examination Scheme:**

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

*LO1: Understand the failures in different types of slopes*

*LO2: Explain about Design and Stability of Slopes*

*LO3: Understand Phenomenon of Landslides and Embankments*

*LO4: Slope stabilizations techniques and design considerations of retaining wall.*

### UNIT -I (9+3)

**Introduction:**

Lateral Supports in Open Cuts, Stability of Hill sides and Slopes in Open Cuts- Causes and General Characteristics of Slope Failure, Engineering Problems Involving the Stability of Slopes. Standard Slopes

**Stability of Slopes:**

Stability of Slopes and Cuts in Sand, Loess, Clay Containing Layers or Pockets of Water Bearing Sand, Quick Clay Flows, Slides in Soft, stiff clay.

### UNIT -II (9+3)

**Design and Stability of Embankments:**

Design and Stability of Embankments, Modern Practice for Railway and Highway Fills, Levees or Dikes, Types of Base Failures, Methods of Investigating Stability

**Embankment Fills**

Fills on Very Soft Organic Silt or Clay, Fills on Homogeneous Clay, Varieties of Failure by Spreading.

### UNIT -III (9+3)

**Landslide phenomenon**

Types and causes of slope failures, Practical applications, Stability analysis of infinite slopes with or without water pressures.

**Finite and Infinite slopes**

Concept of factor of safety, pore pressure coefficients, Mass analysis, Wedge methods, friction circle method; Method of slices, Bishop's method, Janbu's method; Effect of seepage, submerged and sudden draw down conditions.

### UNIT -IV (9+3)

**Slope Stabilization Techniques**

Reinforced Soil, Geosynthetics, Soil Nailing, Influence of Compaction on Rigid Vertical Walls.

### Retaining Walls

Retaining walls and their types, Design considerations for Retaining Wall, Causes and Failures of Retaining Walls.

#### Text Books:

1. Glen M. Boyce, Lee W. Abramson, Sunil S. Sharma, Thomas S. Lee "Slope Stability and Stabilization Methods", Willey Inter science publications
2. Gopal Ranjan, "Soil Mechanics & foundation engineering", New age publications.
3. C.Venkata Ramaiah ., "Geotechnical Engineering", New age publications
4. B.C.Punmia., "Soil Mechanics & Foundation Engineering", Laxmi Publications

#### Course Learning Outcomes:

After completion of the course, the student will be able to

CO1. Understand the importance of Stability of slope sand embankments.

CO2. Able to design of embankment management and retaining walls.

CO3. Understand the Phenomenon of Landslides and Embankments

CO4. Understand the techniques of slope stabilizations and to know the design considerations of retaining wall.

## P14SC206A QUALITY AND SAFETY MANAGEMENT

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam	60 marks

### Course Learning Objectives:

- LO1: To understand the elements of quality planning and the implication
- LO2: Inculcate the concept of quality and safety and its relation during the construction
- LO3: Give the concepts of preparation of quality manuals
- LO4: To understand various considerations involved in structural safety

### UNIT –I (9+3)

#### Construction Organization

Types of Organization-Inspection, Control and enforcement-Quality Management Systems, Responsibilities and authorities in Quality assurance and Quality Control-Architects, Engineers, Contractors, and Consultants, Quality circle.

#### Quality Policy

Objectives and methods In Construction Industry -Consumers satisfaction, Economics-Time of Completion -Statistical tolerance -Taguchi's concept of quality -Codes and Standards - Documents -Inspection procedures -Total QA/ QC programme and cost implication.

### UNIT –II (9+3)

#### Quality Assurance and Control

Objectives-Regularity agent-Owner, Design, Contract And Construction Oriented Objectives, Methods-Techniques and Needs Of QA/QC-Different Aspects of Quality-Appraisals, Factors Influencing Construction Quality. Failure aspects-Critical, Major Failure Aspect assurance during construction, Inspection of materials and machinery, Preparation of quality manuals, check list and inspection report.

#### Quality Management and standards

Concept of quality management in the construction, ISO-9000 Guidelines, Quality standards and / codes in design and construction

### UNIT –III (9+3)

#### Safety strategy

Concept of safety, factors affecting safety- psychological, physiological and technological factors, Planning for safety provisions, Structural safety and its considerations during construction, demolition and during use of equipment. Accidents/injuries and provision of first aid.

#### Safety recommendations and implementation

Site management with regard to safety recommendations. Training for safety awareness and implementation. Formulation of safety manuals. Safety legislation, standards/codes with

regard to construction. Quality vs. Safety.

#### UNIT -IV (9+3)

##### Environmental Safety.

Factors influencing quality of environment and its control, Environmental safety considerations.

##### Safety Organization

Safety Policy and Record Keeping, Safety Culture-Safe Workers-Practices, Company Activities for enhancing safety-Sub contractual obligation and Safety Procedures, Quality vs safety.

##### Text Books:

1. Clarkson H. Oglesby, "Productivity Improvement in Construction", McGraw Hill, 2000
2. James, J.O Brian, "Construction Inspection Handbook – Quality Assurance and Quality Control" Van Nostrand, New York, 1989
3. Juran Frank, J.M. and Gryna, F.M. "Quality planning and Analysis", Tata McGraw Hill, 1982
4. Kwaku A., Tenah and Jose M.Guevera, "Fundamental of Construction Management and Organization", PHI 1995

##### Course Learning Outcomes:

After completion of the course, the student will be able to

- CO1. Understand the importance of quality management during design and construction phase.
- CO2. Understand the quality assurance or quality control in the construction activities.
- CO3. Understand the importance of safety considerations to be made towards environment.
- CO4. Understand the importance and requirement of safety

## P14SC206B CONSTRUCTION CONTRACTS MANAGEMENT

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

### Teaching Scheme

L	T	P	C
3	1	-	4

### Examination Scheme

Continuous Internal Evaluation:	40 Marks
End Semester Exam	60 Marks

#### **Course Learning Objectives:**

*LO1: Explain in detail the process of estimation of a project, procedure related to tenders for their execution, contractual conditions applicable, contract administration for successful execution and dispute resolution*

*LO2: Brief into legal issues related to contracts including Contract Act*

*LO3: Explain the process of Arbitration and Conciliation Act.*

*LO4: BOT, DBOT, Insurances and special contract*

### **UNIT –I (9+3)**

#### **Quantity Surveying**

Basic principles of estimating, Project cost estimation-preliminary and detailed estimation. Bill of Quantities (BOQ) and specification

#### **Rate Analysis**

Principles of rate analysis, direct, indirect cost and overhead charges. Standard methods followed by government and contractors organization

### **UNIT –II (9+3)**

#### **Pre- Tendering**

Pre-Qualification of bidders. Tendering and contractual procedures, Indian Contract Act 1872, Definition of Contract and its applicability.

#### **Types of Contract**

Documents forming a contract, Types of contracts, international contracts, Conditions and specifications of contract.

### **UNIT –III (9+3)**

#### **Contractual Procedures**

Notice Inviting Tenders, Documents forming a contract, Types of contracts, international contracts, Conditions and specifications of contract, Award of contract, various types of bonds/guarantees

#### **Contract Conditions**

Important contract clauses. Terms of payments. Retention. Acceptance and final payment. Time of completion. Extension of time. Maintenance period etc

### **UNIT –IV (9+3)**

#### **Claims and Arbitration:**

Indian contract act and arbitration act. Variations in work and conditions. Claims and disputes. Liquidated damages. Rights. Responsibilities and duties of client (Owner). Architect. Engineer. Contractor etc.

**Insurances & Special Contracts:**

Purchase order as contracts insurance and claims, introduction to special contracts- BOT,PPP,DBOT etc.

**Text Books:**

6. Gajaria G.T., "Laws Relating to Building and Engineering Contracts in India", M. M. Tripathi Private Ltd.,Bombay, 1982 Tamilnadu PWD Code, 1986
7. Kharb, K.S. "A Guide to Quantity Surveyors, Engineers Architects and Builders (Vol I: Taking off quantities, Abstracting & Billing; Vol II: Analysis of Prices)" Sushila Publications.
8. Jimmie Hinze, "Construction Contracts", McGraw Hill, 2001
9. V. K. Raina, "Construction and Contract Management" Shroff Publishers
10. B. S Ramaswamy, "Contracts and their Management", LexisNexis India (2008)
11. Patil, B.S., "Building and Engineering Contracts"
12. Govt of India, Central Public Works Department, Analysis of Rates for Delhi (Vol 1 & 2). and Delhi Schedule of Rates.
13. Govt of India, Central Public Works Department, CPWD 7/8: General Conditions of Contracts.

**Course Learning Outcomes:**

After completion of the course, the student will be able to

CO1. Understands the process of estimation of a project, procedure related to tenders for their execution, Contractual conditions applicable, contract administration for successful execution and dispute resolution.

CO2. Understand the legal issues related to contracts including Contract Act.

CO3. Understand the legal issues related to Arbitration and Conciliation Act.

CO4. understand the Insurances and special contract

## P14SC206C DESIGN OF SPECIAL STRUCTURES

M.Tech. Semester: II

Branch: Structural Engineering & Constructional

Teaching Scheme:

L	T	P	C
3	1	-	4

Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

### **Course Learning Objectives:**

- LO1: Study the concept of design of shells and folded plates and Domes and their implementation  
LO2: Expose the students to various special structures like Chimneys Gantry Girder and Roof trusses and hence design them using I.S Codal provisions  
LO3: To learn the concept involved in Flat slabs and Grid slabs and their Design.  
LO4: Study the importance of special structures like Bunkers and Silos and Design according to I.S Codal provisions.

### **UNIT - I (9+3)**

#### **Shells**

Classification of shell structures – Lames Parameters – Gauss – Godazzi relations – Loves first approximation – Design of singly curved shells – Domes.

#### **Folded Plates**

Structural behaviour of folded plates – equation of three shears – application of Simpson's and Whitney's methods – Comparison of cylindrical shells with folded plates.

### **UNIT -II (9+3)**

#### **Roof Trusses and Gantry Girder**

Analysis and design of Roof Trusses. portal – Gable frames – Design of Gantry Girder

#### **Chimneys**

Introduction, dimensions of steel stacks, chimney lining, breech openings and access ladder, loading and load combinations, design considerations, stability consideration, design of base plate, design of foundation bolts, design of foundation.

### **UNIT- III (9+3)**

#### **Design of Flat Slabs**

Introduction, components, IS code recommendations, Direct design and Equivalent methods, design for flexure and shear.

#### **Grid Slabs**

General features, Approximate Method. Plate theory, I.S. code provisions, analysis and design.

### **UNIT - IV (9+3)**

#### **Steel Bunkers And Silos**

Design of square bunker – Jansen's and Airy's theories – IS Codal provisions – Design of side plates – Stiffeners – Hooper – Longitudinal beams – Design of cylindrical silo – Side plates – Ring girder – stiffeners.

**Text Books:**

1. B. C. Punmia, Ashok Kr. Jain, Arun Kr. Jain, "Design of Steel Structure", 2<sup>nd</sup> Edn., Lakshmi Publishers, 1998.
2. Punmia B.C, Ashok Kr. Jain, Arun Kr. Jain, "RCC Designs (Reinforced Concrete Design)" 10<sup>th</sup> Edn., Lakshmi Publishers, 2006.
3. Ram Chandra, "Design of Steel Structures", 12<sup>th</sup> Edn., Standard Publishers, 2009.
4. Ramaswamy G. S., "Design and Construction of concrete shell roofs"
5. Hendry & Jaeger., "The analysis of Grid Frames and related structures"
6. KrishnaRaju N., "Design of Reinforced concrete Structures"
7. Arya&Azmani., "Design of Steel Structures"

**Course student learning outcomes:**

After completion of the course, the student will be able to,

- CO1. Understand the importance of Shells and Folded plates and their design applications.  
 CO2. Understand the concept of Flat Slabs and the concepts involved in the Design  
 CO3. Understand the technical importance of Bunkers and silos and their design  
 CO4. Understand the concept of Roof Trusses and Gantry Girders

**Course Articulation Matrix(CAM): P14SC206C DESIGN OF SPECIAL STRUCTURES**

P14SC206C		1	1	1	1	1

## P14SC206D THEORY OF PLATES AND SHELLS

Class: M.Tech. II Semester

Branch: Structural Engg. & Construction

### Teaching Scheme:

L	T	P	C
3	1	-	4

### Examination Scheme:

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

#### **Course learning outcomes:**

LO1: Students comprehend the behaviour of plates and shells under different load cases.

LO2: In theory of plates, the students will study the bending theories and energy methods and structural behaviour of plates

LO3: In theory of shells, students will understand membrane theory and membrane analysis for shells

LO4: Design and detailing of special structures

### UNIT-I (9+3)

#### **Cylindrical Bending**

Different kind of plates – Assumptions - Derivation of differential equation for cylindrical bending of long rectangular plates - Analysis of uniformly loaded rectangular plates with wedges simply supported and fixed subjected to uniform load.

#### **Pure Bending of Plates**

Slope and curvature of slightly bent plates – Relations Between moments and curvature - Particular cases of pure bending - Strain energy in pure bending

### UNIT-II (9+3)

#### **Circular Plates**

Symmetrical loading – Relations between slope, deflection, moments and curvature– Governing differential equation – Uniformly loaded plates with clamped and simply supported edges– Central hole – bending by moments and shearing forces uniformly distributed.

#### **Buckling of Plates**

Governing equation for Bending of plate under the combined action of in-plane loading and lateral loads – Buckling of rectangular plates by compressive forces acting in one and two directions in the middle plane of plate

### UNIT-III (9+3)

#### **Classification of Shells**

Definition and assumptions, Introduction to curved surfaces and classification of shells.

#### **Membrane Analysis**

Membrane theory of cylindrical shells and shells of revolution. Axially symmetric bending of shells of revolution.

## UNIT-IV (9+3)

### Bending Theory of Shells.

Circular Cylindrical shells subjected to Normal Loads, Axissymmetrical Bending of circular Cylindrical shells

### Special Structures

Design and detailing of folded plates with numerical examples Design and Detailing of simple shell problems – spherical domes, water tanks and barrel vaults.

### Text Books:

1. S. Timoshenko and W. Krieger, "Theory of Plates and Shells", McGraw Hill
2. Ansel C. Ugural, "Stresses in Plates and Shells", McGraw Hill.
3. Zhilun XU, "Applied Elasticity", Wiley Eastern Ltd. New Delhi.
4. G. S Ramaswamy, "Design and Construction of Concrete Shell Roofs", CBS Publications.
5. Chandrashekhara K., "Analysis of Concrete Shells", New Age International Edition.
6. Chandrashekhara K., "Analysis of Plates", New Age International Edition.

### Course Learning Outcomes:

On completion of this course, students are able to

CO1. Know the behavior of plates and shells subjected to different load cases.

CO2. Get idea on bending theories and governing differential equations for different plates and shells under different loading conditions.

CO3. understand membrane theory and analysis for shells

CO4. Analyze and design special structures like shell structures like domes, and cylindrical shells

### Course Articulation Matrix(CAM): P14SC 206D THEORY OF PLATES AND SHELLS

## P14SC207 DESIGN PROJECT LABORATORY

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

**Examination Scheme:**

L	T	P	C
-	-	3	2

Continuous Internal Evaluation:	40 marks
End Semester Exam:	60 marks

**Course Learning Objectives:**

- LO1: To analyze important structures in civil engineering  
 LO2: To design RCC structures  
 LO3: To design steel chimney  
 LO4: To analyze pre-stressed concrete elements and structures for seismic susceptibility

**List of Experiments**

1. Design of Reinforced Cement Concrete Intz Tank.
2. Design of Steel Chimney
3. Design of Reinforced Cement Concrete Folded plate.
4. Design of Reinforced Cement Concrete Shells.
5. Seismic analysis of structures.
6. Design of Reinforced Cement Concrete Deck Slab Bridge.
7. Design of Reinforced Cement Concrete Deck T-Beam Bridge.
8. Design of Box culvert bridge.
9. Analysis and design of pre-stressed concrete elements.
10. Design of roof truss for wind loads.

**Text Books:**

1. Jain A. K., "Reinforced Concrete Design"., Nem Chand Bros. Roorkee.
2. Shah H. J., "Reinforced Concrete Design"., Charotar Publications, Anand.
3. Vargeese P.C. "Limit State Design of Reinforced concrete", PHI, Limited.
4. Krishna Raju., "Design of Prestressed concrete members" Tata McGraw Hill

**Course Learning Outcomes:**

- After completion of the course, the student will be able to
- CO1. To analyze important structures in civil engineering  
 CO2. To design RCC structures  
 CO3. To design steel chimney  
 CO4. To analyze pre-stressed concrete elements and structures for seismic susceptibility

**P14SC208 STRUCTURAL ENGINEERING LABORATORY**

**Class: M.Tech. II-Semester**

**Branch: Structural Engineering & Construction**

**Teaching Scheme:**

L	T	P	C
-	-	3	2

**Examination Scheme:**

Continuous Internal Evaluation:	40 marks
End Semester Exam	60 marks

**Course Learning Objectives: *The objectives of the course is to***

*LO1: Understand the behavior of Moment-curvature and a/d ratio of beams.*

*LO2: Analyze the shear and bond in concrete*

*LO3: Understand the behavior of concrete under torsion*

*LO4: Understand the temperature and size effect of concrete.*

**List of Experiments**

1. Study on the behaviour of a/d ratio on concrete beams.
2. Moment-curvature behavior of under reinforced beams.
3. Moment-curvature behavior of over reinforced beams.
4. Study the effect of pure shear on concrete.
5. Punching shear resistance of concrete.
6. Tests on bond response of steel and concrete.
7. Effect of cyclic loading on steel.
8. Study of behavior of Beams in Torsion.
9. Effect of temperature on strength of concrete
10. Study on size effect of concrete.

**Text Books:**

1. Park & Paulay, "R.C.C. Structures"
2. Kong and Evans, "Reinforced and prestressed concrete structures"

***Course Learning Outcomes:***

*After completion of the course, the student will be able to*

*CO1. Illustrate the behavior of Moment-curvature and a/d ratio of beams.*

*CO2. Identify the shear and bond in concrete*

*CO3. Illustrate the behavior of concrete under torsion*

*CO4. Analyze the temperature and size effect of concrete.*

## P14DC301 INDUSTRIAL TRAINING

Class: M.Tech. III-Semester

Branch: Structural Engineering & Construction

Teaching Scheme:

L	T	P	C
-	-	-	4

Examination Scheme:

Continuous Internal Evaluation:	100 marks
End Semester Exam:	-

The M.Tech. Coordinator in consultation with the Training & Placement Section has to procure slots for Industrial Training before the last day of instruction of II semester.

The students shall confirm their training slots by the last day of instruction of II semester.

After 8 weeks Industrial Training the students shall submit a certificate and a report in the prescribed format to the department. The Department Post Graduate Review Committee (DPGRC) shall evaluate their submitted reports and oral presentations.

### COURSE OUTCOMES (CO)

CO.1	<i>demonstrate creativity in the design of components, systems or processes of their program of study</i>
CO.2	<i>design an innovative product by applying current knowledge and adopt to emerging applications of engineering &amp; technology</i>
CO.3	<i>work cooperatively with others to achieve shared goal by motivating team-mates with a clear sense of direction, values and ethics,</i>
CO.4	<i>write concisely &amp; convey meaning in a manner appropriate to different readers and verbally express ideas easily understood by others who are unfamiliar with the topic</i>

### Course Articulation Matrix(CAM): P14DC301 INDUSTRIAL TRAINING

### P14DC302 DISSERTATION

Class: M.Tech. III-Semester

Branch: Structural Engineering & Construction

Teaching Scheme:

L	T	P	C
-	-	-	8

Examination Scheme:

Continuous Internal Evaluation:	100 marks
End Semester Exam:	-

**Registration of Dissertation** shall be done within four weeks after completion of the Industrial Training with the supervisor allotted by the department. After the Registration the candidate has to submit and present a brief report focusing the identified topic, literature review, time schedule indicating the main tasks and expected outcome.

**Dissertation Seminar-I:** At the end of first stage (third semester), student shall submit a progress report to the DPGRC and present the same. The Continuous Internal Evaluation (CIE) for the third semester is done by the DPGRC nominated by the Head of the Department.

#### COURSE OUTCOMES (CO)

CO.1	<i>demonstrate creativity in the design of components, systems or processes of their program of study</i>
CO.2	<i>design an innovative product by applying current knowledge and adopt to emerging applications of engineering &amp; technology</i>
CO.3	<i>work cooperatively with others to achieve shared goal by motivating team-mates with a clear sense of direction, values and ethics,</i>
