## **Research & Education Center (POWER ELECTRONICS)**

The objectives of a Research & Education center focused on Power Electronics typically revolve around advancing knowledge, fostering innovation, and educating the next generation of professionals in the field. Here are some common objectives:

### 1. **Research Advancement:**

- Conducting cutting-edge research to push the boundaries of power electronics technology.
- Developing new materials, components, and systems for efficient power conversion.
- Exploring advanced control strategies for improved performance and reliability.

### 2. **Technology Development:**

- Innovating new power electronic devices and circuits for various applications such as renewable energy systems, electric vehicles, and smart grids.
- Enhancing the efficiency, reliability, and compactness of power electronic systems.
- Investigating emerging technologies like wide-bandgap semiconductors (e.g., SiC, GaN) and their integration into power electronic devices.

### 3. **Education and Training:**

- Providing high-quality education and training programs at undergraduate and graduate levels in power electronics.
- Offering specialized courses, workshops, and seminars to disseminate knowledge and skills in the field.
- Mentoring students and researchers to develop their capabilities in theoretical understanding, practical experimentation, and problem-solving.

### 4. **Industry Collaboration:**

- Collaborating with industry partners to address real-world challenges and develop practical solutions.
- Facilitating technology transfer and commercialization of research findings.
- Offering consultancy services and expertise to industries for product development and optimization.

### 5. **Standardization and Policy Advocacy:**

- Contributing to the development of standards and guidelines for power electronic systems.

## Electrical & Electronics Engineering

- Advocating for policies that promote the adoption of energy-efficient and sustainable power electronics technologies.
- Engaging with regulatory bodies and industry stakeholders to influence policies and regulations.

### 6. Interdisciplinary Research:

- Collaborating with researchers from other disciplines such as electrical engineering, materials science, and computer science to address complex challenges.
- Exploring interdisciplinary applications of power electronics in areas like healthcare, aerospace, and communication systems.

### Major equipments: (along with description / Cost/ photographs)

Sl.no	Name of the equipment	Cost in Rs.	photographs
1.	Computers (No.10) (students to simulate the various power converters)	292000	
2.	1-Φ Full Controlled Bridge Converter with R, RL Load (The rectifier is a widely used circuit in power supplies, DC motor controllers, and many other electronic circuits)	19664	
3.	1-Φ AC Voltage Controller (AC voltage controllers are used either for control of the rms value of voltage or current in lighting control, domestic and industrial heating, speed control of fan, pump)	11066
